

800 MYSTERIOUS STRIPED ORBS

A Paranormal Phenomenon

by Mark Mahin

New York City, 2020

This book consists of posts from my “Orb Pro” blog at www.orbpro.blogspot.com. Each post shows one or more mysterious striped orbs that I photographed between July, 2015 and September 2020. The book shows photos of more than 800 such mysterious striped orbs. The appearance of such striped orbs is a paranormal phenomenon beyond current explanation. The photos were all taken in clean, dry air, with the exception of a handful of photos that were taken under foggy conditions.

Such photos cannot be explained as photos of dust, the most common explanation given by skeptics for orb photos. The fallacy behind such an explanation is explained at length in a post in this book, and in the post [here](#). The particles in normal air are about 1000 times too small to produce decent-sized orbs in photos. Moreover, prior to the time when I started publishing these photos of mysterious striped orbs in 2015, no one ever claimed that dust particles could cause something looking like a striped orb to appear in a photo.

A crucial aspect of such mysterious orbs is that they have often tended to display dramatically repeating patterns. Often a very distinctive type of stripe (or set of stripes) may appear inside one of these mysterious orbs, and then the same distinctive type of stripe (or set of stripes) may appear inside mysterious orbs photographed on many other days. The beginning of this book will have a long post showing such dramatically repeating patterns. I published the original version of that post on December 1, 2016. But then I updated the post very many times, adding to it many other photos I took on other dates after that date. There is such a high degree of repetition in such

patterns that it is something we would expect no photographer in the universe to get by chance. The very many repeating orb patterns I have photographed suggest some manifestation by some unfathomable external power.

After this long introductory article showing the repeating patterns of mysterious striped orbs, you will see (in more or less chronological order) posts from 2015 to 2020 showing all of the 800+ mysterious striped orbs I photographed over the course of five years. The photos shown in this book can be seen in their original web posts by using [this](#) link, although since you have this book, you will not need to use such a link, since it will only give you the same pages in this book.

The phenomenon shown in this book of repeating patterns in mysterious orbs photographed in clean dry air is not even the most dramatic phenomenon of orb pattern repetition. The most dramatic such phenomenon is another phenomenon not shown in this book: enormously repetitive patterns that appear when I photograph falling water drops. Such a phenomenon can be seen most abundantly at my blog www.orbrpo.blogspot.com, my site www.markmahin.com, and at the links [here](#), [here](#) and [here](#). At www.markmahin.com you can get links to quite a few videos that show many minutes of me photographing my camera viewfinder (the back display screen) while I photographed very dramatically repeating patterns of mysterious orbs. Such videos (which cannot be faked by using some product such as Photoshop) establish the authenticity of my photos of dramatically repeating orb patterns.

All of the photos on my site www.orbpro.blogspot.com and all of the photos in this book are authentic and unaltered. I did not use trickery of any type to get such photos, or any type of special or uncommon technique. I have never used, bought or downloaded any version of Photoshop, and have never even seen a Photoshop screen.

Please excuse the repetitive links at the right margin of this book. By using the $\pm$ control at the bottom of a page, you can “zoom in” to read the text easier, and exclude such unneeded links.

Recurring Patterns in Mysterious Orbs

Note: This post is being continually updated to have the latest examples of recurring pattern orbs. So while the post date is December 1, 2016, the post includes many photos taken long after that date.

Of the many types of strange phenomena documented on this blog (summarized [here](#)), perhaps the most dramatic is the phenomenon of recurring patterns in orbs. Not counting the very many recurring patterns I have got when photographing falling water drops, I have identified 39 types of recurring orb patterns. This post (which I will be updating as time goes on) will be summarizing the evidence for recurring orb patterns.

In each of the photo grids below, we will be seeing a series of photos taken over the course of a number of days (almost always weeks or months); and each occurrence of the pattern occurred directly after many of my photographs showed no such pattern. In no case will we be seeing patterns that showed up in consecutive photos. So I am sure that none of these photos was caused by some camera irregularity (such as cracks or lines on the camera lens). Such an irregularity would cause a photo anomaly that would show up in consecutive photos; but none of these anomalies appeared in consecutive photos.

By using [this](#) link you can see the original posts in which I first presented the photos below. 98% of the photos below were taken in dry clean air, and the remaining 2% were taken when there was fog but no rain. None of the photos on this page were taken when I photographed falling water drops.

The "Inverted Y" Pattern

I have so far taken 11 [photos](#) of mysterious orbs that had a set of stripes resembling an upside-down Y. The pattern has appeared between 2016 and 2018. Below are 6 of these orbs.

Another photographer has twice got this inverted-Y pattern in mysterious orbs he photographed. See [here](#) for details.

The "Umbilical Cord" Pattern

I have so far taken 10 [photos](#) of mysterious orbs that had a set of stripes resembling a looped umbilical cord. They are shown below. Note the common elements of the pattern: a vertical stripe twisting over to the right and then twisting back again to the left, forming a loop with a little circle in the middle (and also a little stripe part underneath the loop). The photos were taken between September 2016 and November 2016.

► July (132)

In the photo [here](#) (taken while I was photographing falling water drops), we see 10 orbs with curved stripes. See [here](#) for 75+ orbs I have photographed with curved stripes.

The "Diagonal Slash" Pattern

I have so far taken 49 photos of mysterious orbs that had a diagonal slash that goes from one side of the orb to another, with a resemblance to a slash rather than a backslash. These photos were taken over the course of several years. Below are ten of the photos. You can see the original posts in which I published these photos [here](#). The photo in the top right of the grid below was particularly astonishing, showing two striped sky orbs right next to each other.

Here are four more photos showing the same pattern:

- ▶ June (121)
- ▶ May (141)
- ▶ April (135)
- ▶ March (155)
- ▶ February (165)
- ▶ January (186)

Here is one more:

The "Short Diagonal Stripe" Pattern

I have seven times photographed mysterious orbs with a short diagonal stripe stretching from the top right corner of the orb to about the center of the orb. These look like the "diagonal slash" orbs shown above, except that the stripe or slash is only half as long. Below are four of these orbs.

Here are two others:

orb on Mars (1)

orb on orb (4)

orb on roof (42)

orb on row of Grand Central lights (63)

Here are two more examples. Notice how the orb at right has a stripe making an uncanny alignment with a structural stripe behind it.

The "Curvy 9 Which Fell Down" Pattern

For lack of a better description, "Curvy 9 Which Fell Down" is my name for the strange pattern below that I have twice photographed in mysterious orbs.

The "4 Stripes" Pattern

I have twice photographed the extremely distinctive pattern below in mysterious orbs.

- orb on stairway (8)
- orb over head (1)
- orb pair (19)
- orb parachutes (1)
- orb pattern becoming less complex (1)
- orb pattern growing more complex (9)
- orb perched on window frame (7)

The Belt-Like Pattern

I have 43 times photographed mysterious orbs with a stripe stretching horizontally from the left side of the orb to the right side. Below are these photos of orbs with belt-like stripes.

Here are two more examples, which oddly occurred near the same spot (ornamental window frames at the top of Grand Central Terminal).

The J-Like Pattern

I have eight times photographed mysterious orbs that had a "J" letter inside them. Three are shown below.

Here is one more.

Here is one more:

Here are two more, photographed about 24 hours apart. There is an uncanny similarity that you can see by comparing the bottom part of the "J" shapes.

yellow air orb (168)

The mysterious orb shown below had a J-shaped stripe very closely resembling that of the two orbs shown above.

The "Two-Thirds of a Y" Pattern

I have 3 times photographed mysterious orbs that had a pattern that looks like two-thirds of the letter Y (with the left third of the letter missing). The examples are below.

The "T With Slanted Top" Pattern

I have taken four photos showing mysterious orbs with the pattern shown below in which we see a T shape with a slight break between the lines, and a slanted top that is not wavy. The photos are below.

yellow green orb in water drop (4)

yellow green orb near water drop (1)

yellow orb crescent (3)

yellow orb in water drop (1)

yellow orb mushroom (2)

yellow orb near water drop (34)

yellow striped orb (2)

yellow-green air orb (1)

yellowish-blue air orb (1)

yellowish-orange orb veil (3)

zig-zag stripe in orb (1)

Below is another example.

The "Corner Chord" Pattern

In geometry a chord is a line connecting two points on a curve. I have 46 times photographed mysterious orbs with a chord stripe in one of the corners of the orb. Below are nine of these photos.

Below are three more.

Here are three more:

Here are three more:

Here are three other examples:

Here are two other examples, both of which occurred on the same day in front of a high window at Grand Central Terminal:

Here is another example:

Here is another example:

Here are two more examples:

Here are four more examples:

Here are four more examples:

Here is another example:

Here is one other example:

Below are four more examples:

Below are two more examples:

See [here](#) and [here](#) and [here](#) for three other examples of this pattern.

The "Side Curve" Pattern

I have 6 times photographed mysterious orbs with curved stripes on their left or right sides. Below are these photos.

Two other examples are below.

The "Letter T" Pattern

I have five times photographed mysterious orbs with a letter T pattern inside them. Below are two of the photos (the "T" in the second photo is kind of slanted over to the right).

Below are two more examples, which are astonishingly similar. The second one appeared about an hour after the first. I took several photos in between taking these two photos, and they showed no orbs and no lines.

Here is one more example:

The "Triangle with Legs" Pattern

I have two times photographed a pattern I call "triangle with legs." In both photos we see a dark triangle shape, and in both cases there are two stripes (or "legs") at the bottom of the triangle, one connecting to the bottom left corner of the triangle and the other connecting to the bottom right corner of the triangle. The photos are below.

The "H" Pattern

I have two times photographed mysterious orbs with a letter "H" inside them. In both cases the right "leg" of the "H" curved to the right. The two photos (taken on the same day) are below.

The "7" Pattern

I have six times photographed mysterious orbs with the number 7 inside them. Three examples are shown below (see [here](#) for the original posts).

Below is another example:

Below is another example:

Below is another example:

The Vertical Stripe Pattern

I have 22 times photographed mysterious orbs with a vertical stripe stretching from the top of the orb to the bottom of the orb. Six examples are shown below.

Below are two other examples:

Another example is below:

Here are two more examples:

Here are two more examples:

Here are two more examples:

Here is one more example:

Here is one more example:

Here are four more examples:

Below is another example:

The Eleven Pattern

I have twice photographed mysterious orbs with a number 11 inside them. The two photos are below. In both cases, we see a slanting to the right.

The X Pattern

I have five times photographed orbs with a letter X inside them. In each of these cases the X letter was less wide and more tall than a typical X. Below are two of these photos:

Here is one other example:

Here are two other examples that appeared right next to each other in the same photo:

The Curvy Y Pattern

I have twice photographed mysterious orbs which had had both a curved stripe and a straight stripe, with the two stripes forming a kind of curvy letter Y. The two examples are shown below. The two photos were taken four days apart.

The "L Version 1" Pattern

Below is a repeating orb pattern that I observed in photos occurring only a minute apart. An intervening photo showed no such effect.

The "L Version 2" Pattern

Below is a repeating orb pattern that I observed in photos occurring 36 minutes apart. Photos in between these two showed no such effect.

The "Ballet Dancer" Pattern

Below is a repeating orb pattern that I observed in photos taken an hour and twenty-one minutes apart. Photos in between these two showed no such thing. The pattern resembles a stick figure of a leaping ballet dancer.

The pattern was repeated again on September 6, as shown below:

The Right-Angle Pattern

I have at least eleven times photographed mysterious orbs with stripes that formed a right angle. Four such photos are shown below. They were all taken within a 24-hour period.

Below are two other photos taken a few days before the ones above:

Below is another example:

Below is another example:

Below is another example:

Below are two more examples. Although the line curves over a little, the angle is approximately a right angle.

The "Foot" Pattern

Below we see seven mysterious striped orbs that I photographed in August

2019 and September 2019. They all have stripes that create the appearance of a foot-like shape.

Below is another example, which appeared in September 2019, about 10 hours after I first published the seven photos above. The item on the right is a shadow from a sports trophy earned by one of my daughters.

The "Hook" Pattern

The photos below show six mysterious orbs I photographed that all have

hook-shaped stripes.

Below are two additional examples:

Here is one other example (from 10/02/2019, a few days after the two photos above):

Below is another example:

The "E Minus" Pattern

Below is a strange pattern I have photographed on six different days.

Below we see what looks like two half-repetitions of the pattern. Notice how they both have the same little circle (at the bottom end of the "E") that we see in the two bottom photos above (from February 8 and February 19).

The "Hobby Horse" Pattern

I got two cases of the pattern below, which rather resembles the child's toy called a hobby horse.

The "Tilted W" Pattern

I got two cases of the pattern below, in which we see a circular shape above a tilted W.

The "Swordfish Head" Pattern

I got five cases of the pattern below, in which we see something that looks rather like the head of a swordfish. Four are shown below.

Below is one other example:

The "Ribbon and Ring" Pattern

I got three cases of the pattern below, consisting of a somewhat curvy stripe

and a ring above the stripe.

The Water Face Effect

The most dramatic example of a recurring orb pattern is what I call the water face effect, described [here](#). The recurring pattern is a simple face. I have taken more than 400 photos showing multiple examples of this pattern, as you can see [here](#). A video compiling many of these photos is [here](#). See [here](#) and [here](#) for videos showing my camera viewfinder while I photographed such face-like details while photographing ordinary falling water drops.

Dramatically Repeating Motifs Appearing When I Photographed Falling Water Drops

This page has not shown any photos taken while I photographed falling water drops. While photographing falling water drops, I have very often got extremely dramatic cases of repeating orb motifs. This effect occurs so strongly and dramatically that I have labeled a series of such photos "photos suggesting a supernatural design effect." You can see the series of photos [here](#) (keep pressing Older Posts at the bottom right to see all the photos in the series). Or to see highlights from such a series, look at the photos [here](#) and [here](#).

The effect is not at all a subtle one. For example:

- [one day](#) I got a half-ring motif that appeared in more than 20,000 orbs;

- [another day](#) I got hundreds of photos that each showed multiple orbs that each had a half-oval hole;
- [another day](#) I got more than 5000 orbs that each had a large oval hole;
- [another day](#) I got more than 500 orbs that each had a very noticeable exclamation mark motif;
- [another day](#) I got more than 1000 orbs with a breast-like shape inside them;
- [another day](#) I got more than 100 orbs that each had a turtle-shaped motif;
- [another day](#) I got more than 5000 orbs that each had a snowman-shaped motif.

A very large number of striking motifs have abundantly appeared (with a very high degree of repetition) while I have photographed falling water drops. Click [here](#) to watch a 38-minute video showing my camera viewfinder as I photographed such massively repeating patterns appearing.

Perhaps the easiest way to see the full extent of the vast pattern repetition I have got when photographing ordinary drops of pure, clean water is to watch the 94 minute video [here](#). This video is chronologically organized, and shows you the most dramatic pattern repetitions that occurred on particular days. I include in the video written discussion of how many times the patterns repeated.

Another Photographer Getting a Repeating Orb Pattern

A very strong pattern repetition effect can be seen in the orb photos of Marion Atehsa Cyrus (see [here](#) for how to best view them). In more than 50 of Marion's orb photos, we see a repetition of a kind of "nucleus" repeating pattern, in which an orb will seem to have a central nucleus that is about 20% or 25% of the total area of the orb.

Conclusion

What is the chance of any photographer getting this many pattern repetitions

Green Orb Spooks the Station

Photo date: April 20, 2016. Photographer: Mark Mahin.

The photo below was taken in Grand Central Terminal in New York. We see a green orb floating mysteriously above the commuters. This color is rather rare -- I normally get blue and white orbs in this station (although I sometimes get pink orbs here).

Below is a closeup. We see a stripe-like feature that I often notice in orbs.

Another Striped Sky Orb

Photo date: April 7, 2016. Photographer: Mark Mahin.

The photo below shows a strange striped orb that I photographed in the sky. It is one of several such orbs I have photographed in the sky, as you can see [here](#). We see an unusual combination of colors, including red and green. Is that an eye peering at us?

There was no rain, fog, mist or precipitation on this night. The air quality listed on [airnow.gov](#) was "good," with a rating of 31.

Odd Orbs in the Station

Photo date: April 1, 2016. Photographer: Mark Mahin.

The photo below shows an unusual-looking orb I photographed at Grand Central Terminal. What's odd about this one is that the right part is a different shade of blue than the rest of the orb.

The color-adjusted photo below shows another odd-looking orb I photographed on this day. We see another example of an orb with a strange stripe feature. See [here](#) for 8 similar photos of striped orbs, some showing orbs in the sky.

Orbs with such features are rare. It's more common to see an orb like the one below, with a rather uniform appearance inside the orb.

Strange Striped Orbs Float Mysteriously

At Grand Central Terminal in New York there are some unusual windows shown in the photo below (from March 7, 2016), which also shows a mysterious bright orb appearing near the windows.

- [air orb with oval mark](#) (1)
- [air orb with rainbow edge](#) (1)
- [air orb with small ring](#) (14)
- [air orb with triangle](#) (7)

A Strange Striped Orb

Photo date: March 11, 2016. Photographer: Mark Mahin.

The photo below was taken in Grand Central Terminal in New York. We see an orb with a strange stripe feature. It reminds me of the striped orbs seen in [this](#) series of photos.

On the same day I took the photo below, in which we see a bright orb near the floor, one that almost seems to have a face.

A Striped Orb in the Sky

Photo date: March 18, 2016. Photographer: Mark Mahin.

The photo below shows a very unusual purple striped orb floating above a building. See [here](#) for some other examples of striped sky orbs.

There was no rain, fog, mist or precipitation on this night. The air quality listed on [airnow.gov](#) was "good," with a rating of 26 (anything below 50 is considered good).

A Strange Striped Orb

Photo date: November 9, 2015. Photographer: Mark Mahin.

The photo below shows a highly unusual orb I photographed against a featureless wall indoors. We see a strange feature on the orb. Note the extremely distinctive "shadow stripe" in which there are two thin stripes flanking the thick stripe.

The posts [here](#) show similar looking orbs that I have photographed in the sky.

[pink and orange orb](#) (1)

[pink orb cluster](#) (1)

There is a strange story concerning this photo. A few seconds before, I took a photo that showed an orb of about the same size, at about the same spot. But the orb was very dim, and barely visible. I then kind of wished that the orb would show up at that spot, but much brighter. The next photo I took after thinking this was the photo at the top, which showed an orb at about the same spot as the dim orb I had previously photographed, but much brighter. It was almost as if my thoughts had been read.

This experience is consistent with what has been reported by other orb photographers, that orbs sometimes seem to appear in a way that reflects human wishes, although such an effect does not work in any reliable, regular way.

A Rare "Cracked" Orb

Photo date: July 14, 2015. Photographer: Mark Mahin.

The photo below was taken in Grand Central Station in New York. We see two orbs near the top, and one of them has a "cracked" appearance, looking rather like a hard-boiled egg that got cracked when someone dropped it on the floor. I've photographed hundreds of orbs at this location, but this is the first one that had such an appearance.

The Strange Marks of the Floating Orb

Photo date: June 23, 2016. Photographer: Mark Mahin.

The photo below shows an orb observed at Grand Central Terminal in New York. We see two unusual marks on the orb.

Below is a closeup (I used the IrfanView "Auto-adjust colors" menu option on the closeup). The top feature reminds me of a tilde.

A Striped Blue Orb

Photo date: June 22, 2016. Photographer: Mark Mahin.

The photo below (taken in Grand Central Terminal in New York) shows a mysterious blue orb floating near the top of the station. Note the strange curved stripe inside the orb. I have recently been photographing these striped orbs more and more frequently, as you can see [here](#).

Striped Sky Orb Above a Tree

Photo date: June 21, 2016. Photographer: Mark Mahin.

The photo below shows a striped orb I photographed above a tree (my use of an "Auto-adjust colors" menu option somehow caused the tree to look redder than it did in the original photo). See [here](#) for quite a few other examples of these strange striped orbs.

Striped Sky Orb Floats Mysteriously

Photo date: June 16, 2016. Photographer: Mark Mahin.

The photo below shows a striped orb in the sky. I seem to be photographing these striped orbs more and more often, as you can see [here](#). I have other photos showing sky orbs with stripes about the same width as this one.

The photo above is a closeup of the top of the photo below (I used the IrfanView "Auto-adjust colors" menu option on the closeup).

There was no fog, mist, rain or precipitation on this night.

A Blue Striped Orb

Photo date: June 15, 2016. Photographer: Mark Mahin.

The photo below was taken in Grand Central Terminal in New York. We see a blue orb that has a stripe. I am photographing these striped orbs more frequently these days, both indoors and in the sky, as you can see [here](#).

Strange Striped Orbs

The photos below show orbs that I photographed in an indoor location on June 6, 2016 and June 7, 2016. Both show a strange stripe detail on the orbs. Appearing against a featureless wall, the orbs had an apparent size of about 7 inches.

Striped Orb and the Violet Orb

Photo date: June 3, 2016. Photographer: Mark Mahin.

The photos below were taken in Grand Central Terminal in New York, and show some of the windows at the top of the station. On the left we see a striped orb (not all that rare, because I have photographed striped orbs in the air 18 times, as shown [here](#)). On the right we see a pretty rare violet-colored orb.

Striped Strangeness

Photo date: May 31, 2016. Photographer: Mark Mahin.

The photo below was taken in Grand Central Terminal in New York. We see a strange striped orb floating above a row of lights above the station. It seems I am starting to see these striped orbs more often (see [here](#) for another striped orb I photographed on the same day).

The photo was cropped from the larger photo above.

A Striped Red Sky Orb

Photo date: May 31, 2016. Photographer: Mark Mahin.

The photo below shows a very unusual striped red orb floating above a building in New York City. I have 16 previous times photographed striped orbs like this floating in the air, as shown [here](#).

There was no rain, fog, mist or precipitation on this night. The air quality listed on [airnow.gov](#) was "good," with a rating of 49.

Call Them "Wong Wows"

I just came across the Facebook page of Candice Wong, who has taken some orb photos similar to some of mine. [Here](#) and [here](#) she has photos of striped orbs, which I have also photographed [here](#). In [this](#) photo she has a very spectacular shot of what I call a "string of pearls" moving orb, the same type of effect I show in [this](#) series of 37 photos.

Who Took a Bite Out Of It?

Photo date: May 3, 2016. Photographer: Mark Mahin.

The photo below was taken in Grand Central Terminal in New York. We see a bright orb hanging out near the upper row of lights in the station. The orb has an unusual mark, as if someone had taken a bite out of it.

Speaking of unusual orbs, on the same day I photographed this strange orb, unusual not only because of its green color but because of the strange mark on it.

A Striped Purple-Red Sky Orb

Photo date: May 9, 2016. Photographer: Mark Mahin.

The photo below shows a striped purple-red orb above some buildings in New York City.

Below is a closeup of the strange orb (I used the IrfanView "Auto-adjust colors" menu option on the closeup).

This is the 13th time I have photographed a striped orb floating in the air, as shown [here](#) (the link shows several other striped sky orbs).

There was no rain, fog, mist or precipitation on this night. The air quality listed on [airnow.gov](#) was "good."

Note how in the top photo we see lots of orbs, but none of them in front of the buildings. That's a strong indication we are not seeing any particles near the camera, which would be evenly scattered around the photo area. See [here](#) for 31 similar photos, many of which show lots of orbs in the sky, but no orbs in front of buildings at the bottom of the photos.

Three Parallel Lines on an Orb

Photo date: August 11, 2015. Photographer: Mark Mahin.

The previously unpublished photo below (taken from my backlog) shows (at Grand Central Terminal in New York) a very distinctive orb feature I have also noticed in [this](#) series of 8 photos: a thick orb stripe with two thin stripes that flank that stripe.

Spooky Stripes of the Window Haunters

Photo date: July 13, 2016. Photographer: Mark Mahin.

The three photos below all show orbs photographed near the distinctive-looking upper windows at Grand Central Terminal in New York. The first two orbs have a large stripe, and the third just a short stripe. I am now photographing these striped orbs very frequently (you can see some examples [here](#)).

Striped Orb Above the Flag

Photo date: July 11, 2016. Photographer: Mark Mahin.

The photo below shows a striped orb floating above a flag in Grand Central Terminal in New York. I now have more than 50 [photos](#) of striped orbs, about half of which look like this one, with a thick stripe stretching from one side of the orb to the other side. I defy anyone to produce a previously published photo of a known airborne natural particle with this type of stripe. You don't see this type of stripe in natural airborne particles.

Floating Orb With a "Naughty" Stripe?

Photo date: June 23, 2016. Photographer: Mark Mahin.

I photographed the orb below at an indoor location. Like many orbs I have been photographing recently, this one has a stripe. This particular stripe has a rather phallic look to it.

Two Striped Orbs With the Same "Fingerprint"

The top photo below shows an orb I photographed in Grand Central Terminal in New York on July 7, 2016. The bottom photo shows an orb I photographed indoors on the previous day. Notice that both orbs have the same extremely distinctive marking. In both cases we can see a lasso-like shape, and in both cases we can almost seem to see a bird-like thing inside the lasso, with the bird-like shape having a little stripe. Below each of these "lassos" is a similar mark at the bottom center of the orb. There was no other appearance of these strange markings in hundreds of other photos taken on these two days.

Only yesterday I had posted a [similar case](#) of two striped orbs with the same very distinctive markings. Both of these cases would require perhaps a one-in-a-million coincidence for them to occur by chance. The chance of coincidentally getting both of these cases in about 3 days of time is something like 1 in a trillion. I may note that natural particles are never photographed with thick stripes such as we see here.

The Same Strange Mark on Two Striped Orbs

Photo date: July 6, 2016. Photographer: Mark Mahin.

The photos below show two orbs photographed floating about indoors. Both have the same very distinctive-looking stripes. The top orb is particularly astonishing. Each stripe has a kind of "triple line" appearance in which we see thin lines above and below (or to the left and right of) the thick stripe (what is known as a shadow stripe). I defy anyone to produce a photo of a natural particle with the kind of thick stripes we see here.

Striped Enigmas

Photo date: July 3, 2016. Photographer: Mark Mahin.

The photo below shows two striped orbs I photographed. The one on the left was photographed in the sky, and the one on the right was photographed indoors. The orb on the right has an unusually thick stripe, and apparently also has two other stripes.

There was no fog, mist, rain or precipitation on this day.

30 Striped Orbs

The photo below shows various striped orbs that I have photographed in the air, indoors and outdoors. I have recently been photographing an increasing number of these strange striped orbs, which typically have a thick stripe. See [here](#) for the original photos.

Below is my previous collection of striped orbs, which were all photos of striped orbs seen while photographing water drops. The photos above, conversely, all show striped orbs in dry air.

Reappearance of the Double-Striped Orb?

Photo date: July 1, 2016. Photographer: Mark Mahin.

The first photo below shows an orb I photographed near the ceiling of Grand Central Terminal in New York. The second photo shows an almost identical-looking orb I photographed on June 23, 2016 (as described [here](#)). Both orbs have almost identical stripes. The chance of this happening coincidentally seems infinitesimal.

Day of the Perching Orbs

Photo date: May 3, 2016. Photographer: Mark Mahin.

The three photos below show three orbs that I photographed in Grand Central Terminal in New York. Each almost looks like it is resting on a perch. Two of the orbs have strange stripes.

More Striped Orbs

Photo date: June 30, 2016. Photographer: Mark Mahin.

The two photos below show striped orbs that I photographed indoors, both of which had an apparent size of about a soccer ball. As you can see [here](#), I have now published more than 50 photos of these mysterious striped orbs, all of which show thick stripes like the ones below (never thin stripes).

Was the Striped Blue Orb Reading the Ad?

Photo date: June 30, 2016. Photographer: Mark Mahin.

At Grand Central Terminal in New York they recently put up the advertising banner shown below, which in this photo is totally upstaged by a mysterious striped blue orb floating above it. Was the orb reading the ad?

Striped Orb In Front of Triangle

Photo date: June 30, 2016. Photographer: Mark Mahin.

The photo below shows part of the ceiling of Grand Central Terminal in New York. We see an orb right in front of one of the very rare triangle shapes visible in the station, the triangle being formed by an intersection of structural lines. The orb has a strange stripe, something that is appearing more and more often in the orbs I photograph (as shown [here](#)).

Striped Orbs in the Station

The photos below show 3 striped orbs I photographed floating around on the ceiling at Grand Central Terminal on June 13, 2016, June 15, 2016 and June 21, 2016. You can see 48 other examples of these strange striped orbs [here](#).

Another Striped Orb

Photo date: June 27, 2016. Photographer: Mark Mahin.

The photo below (taken indoors) shows what I have been photographing with increasing frequency: a striped orb. About half of my 42 [photos](#) of striped orbs show stripes like this one: a thick stripe stretching from one side of the orb to the other. I defy anyone to produce a photo of any natural particle that has such a stripe.

Another Blue Striped Orb

Photo date: June 23, 2016. Photographer: Mark Mahin.

The photo below shows an orb observed next to one of the windows at Grand Central Terminal in New York. We see what I seem to be photographing more and more often these days: a striped orb. See [here](#) for 35 other examples of striped orbs.

More Striped Orbs

Photo date: July 30, 2016. Photographer: Mark Mahin.

The photos below both striped orbs I photographed at an indoor location. These are the 95th and 96th examples of striped orbs I have photographed (see [here](#) for other examples). Stripes such as these are never seen in natural airborne particles.

The lower orb has a strange eye-like feature. Below is a closeup of the green orb. The line at the bottom of the orb isn't a feature of the orb -- we are merely seeing a line from the background. But the curved stripe at the top of the orb is not part of the background.

As well as photographing 90+ cases of striped orbs (as shown [here](#)), I have ten times previously photographed orbs with a "triple stripe" like the one we see above -- in which a thick line is flanked by a thin line with the same shape, above it and below it (see [here](#) for examples).

In fact, the orb stripe here is pretty much a "dead ringer" for the orb stripe shown below, which I posted on July 20, in [this](#) post.

Striped Orb Appears Just After I Asked for a Striped Orb

Photo date: July 26, 2016. Photographer: Mark Mahin.

Orbs do not have any general tendency to appear upon command, so it's very rare for me to audibly request an orb. But just occasionally I notice an astonishing case in which an orb appears just after I request one -- sometimes with the characteristics or position matching what I asked for (as in these [cases](#) and [this case](#)). Just before taking the photo below, I said aloud something like, "How about a nice striped orb?" In the very next photo I took, a striped orb did appear.

This is my 90th published example of a striped orb (see [here](#) for other examples, many of which show stripes like this one, a big thick stripe

Two Striped Sky Orbs With Similar-Looking Stripes

Photo date: July 24, 2016. Photographer: Mark Mahin.

The photos below show orbs I photographed in the sky. Both orbs have similar-looking stripes stretching from one edge of the orb to the opposite edge. Even the direction of the stripe looks similar, with both stripes having the same angle of inclination. See [here](#) for 89 other photos of striped orbs.

There was no fog, mist, rain or precipitation on this night.

A Transparent Striped Orb

Photo date: April 28, 2016. Photographer: Mark Mahin.

The previously unpublished photo (from my photo backlog) shows a transparent orb with a strange stripe, observed near a window at Grand Central Terminal in New York.

This is the 87th photo I have published showing a striped orb floating about in the air. See [here](#) for other examples.

Orb With a T-Shaped Stripe

Photo date: July 22, 2016. Photographer: Mark Mahin.

The photo below shows an orb I photographed on the ceiling of Grand Central Terminal in New York. We see a T-shaped stripe. Not something that is ever observed in natural particles. The background was solid green.

A Striped Orb With the Letter "M"

Photo date: July 20, 2016. Photographer: Mark Mahin.

The photo below shows a striped orb I photographed in Grand Central Terminal in New York. Other than the weird stripe, what is particularly strange about this orb is that we seem to see the letter "M" in the middle of the orb. Is it just coincidence that this is the initial of my first and last name?

This is my 85th photo of a striped orb in the air. See [here](#) for other examples.

Striped Orb Looks Like Some Floating Pill

Photo date: July 20, 2016. Photographer: Mark Mahin.

The photo below (taken in Grand Central Terminal in New York) shows what I have photographed quite a few times: an orb with a thick stripe stretching from one side of the orb to the other.

I am photographing these striped orbs in increasing numbers, and photographed four striped orbs on this night. See [here](#) for 81 previous photos I have taken of striped orbs.

Photo date: July 19, 2016. Photographer: Mark Mahin.

A few days ago (July 17, 2016) I had a dream of an orb with a curved stripe on its top. On that day I sketched in pencil the drawing shown at right, trying to remember how the orb looked in the dream. Yesterday I took the orb photo shown at left. It bears a close resemblance to my sketch.

Since I have previously got quite a few photos showing curved orb stripes (as you can see [here](#)), I cannot claim this incident as an example of a precognitive dream. I may have been dreaming about the past, rather than the future.

We see in the photo on the left an example of a stripe with three lines -- a thick line flanked above and below by two thin lines with the same shape. This extremely distinctive feature (called a shadow stripe) is also shown in [this](#) series of 8 photos.

The Orb Was Striped So Strangely

Photo date: July 18, 2016. Photographer: Mark Mahin.

The photo below was taken in Grand Central Terminal in New York, and shows what I have photographing with increasing frequency: a striped orb. This is the 80th time I have photographed a striped orb in the air (see [here](#) for other examples).

Photos of natural particles never show stripes like this. Even if one examines collections of unusual-looking orb photos (such as those on [this list](#)), it is rare to see orbs with stripes like this. But I was able to find another photographer who had photographed striped orbs, as you can see in [this photo](#).

Hook-like Stripe of the Blue Orb

Photo date: July 18, 2016. Photographer: Mark Mahin.

The photo below was taken in Grand Central Terminal in New York, and shows what I have been photographing more and more frequently these days: an orb with a stripe. This particular stripe has a very distinctive hook-like appearance. See [here](#) for 78 other examples of striped orbs.

Were They Peering Out the Windows?

Photo date: July 7, 2016. Photographer: Mark Mahin.

The photos below show two orbs at a ledge-like surface near a window in Grand Central Terminal. The larger orb has a curved stripe near its top.

On the same day I photographed the floating orb below, which is so bright that you might think it is part of the chandelier behind it. It wasn't, and appeared only in this photo.

Orb With a Curved "Shadow Stripe"

Photo date: September 2, 2016. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors. It is one of more than 100 striped orbs I have photographed (as shown [here](#)). We see a very distinctive type of stripe -- what clothes makers call a shadow stripe, in which there is a thin stripe that flanks a thick stripe. I have 16 previous times photographed orbs with this strange "shadow stripe" feature, as you can see [here](#).

Orbs With a Similar Squiggly Stripe

Photo date: August 31, 2016. Photographer: Mark Mahin.

I photographed the orb on the top at Grand Central Terminal in New York. I photographed the orb on the bottom at another indoor location. Notice how they both have a similar-looking squiggly stripe.

The second one looks very similar to an orb I photographed on August 23, as reported [here](#):

The Orb's Squiggly Stripe

Photo date: August 19, 2016. Photographer: Mark Mahin.

The photo below shows a striped orb with an unusual squiggly type of stripe. The stripe almost looks like it has twisted itself into a loop. The orb had an apparent size of about a soccer ball.

A Striped Sky Orb With a Red Aura

Photo date: August 12, 2016. Photographer: Mark Mahin.

The photo below shows a striped orb above a building on Park Avenue in New York. This is my 106th photo of a mysterious striped orb. See [here](#) for similar photos. These strange striped orbs often look like this, with a thick stripe stretching from one side of the orb to the other.

37 Mysterious Striped Orbs

The composite image below shows 37 mysterious striped orbs I have photographed since July 6, 2016. The most striking ones are those in the first row, where we see two cases in which the same very distinctive stripe shape was repeated. Stripes such as these in orbs are powerful evidence that we are not seeing here any type of natural particles, because natural particles never have stripes like these. See [here](#) for the original posts in which these photos appeared. Some of these objects were observed indoors, and some in the sky.

They Haunt This Ceiling

Photo date: August 11, 2016. Photographer: Mark Mahin.

The photos below show three orbs I photographed in the ceiling area of Grand Central Terminal in New York. The one in the middle reminds me of a golf ball in a golf ball hole. Notice the strange stripe in the one on the right.

Yet Another Mysterious Orb With a Very Distinctive "Shadow Stripe"

Photo date: August 3, 2016. Photographer: Mark Mahin.

Clothes manufacturers use the term "shadow stripe" for a stripe consisting of a thick stripe that is flanked by two thin stripes. Below is an example of a shadow stripe.

Besides photographing 100+ orbs that have stripes (as shown [here](#)), I have 14 previous times photographed orbs with "shadow stripes" consisting of a

Another Repeating Pattern in Striped Orbs

Below we see some mysterious orbs I photographed at Grand Central Terminal in New York. The first photo below was taken on September 27, 2016. The second photo (posted [here](#)) was taken on September 1, 2016. The third photo (posted [here](#)) was taken on July 13, 2016. Notice that all three have an "exclamation mark" pattern, with a small circle underneath a line. The second and third orbs are "dead ringers" for each other. This is one of numerous cases I have identified of a repeating pattern in orbs. You can see other cases by looking at [this](#) series of posts.

A Striped Multicolored Sky Orb

Photo date: September 27, 2016. Photographer: Mark Mahin.

The photo below shows an orb that appeared on the top border of a larger photo I took. The orb has two types of weirdness: a multicolored appearance and a strange stripe. See [here](#) for other photos of multicolored sky orbs, some of which also have stripes.

There was no fog, mist, rain or precipitation on this night. The air quality listed on [airnow.gov](#) was "good," with a level of 42.

Striped Orb With an Eye?

Photo date: September 16, 2016. Photographer: Mark Mahin.

The photo below shows a mysterious striped orb, something I am photographing with increasing frequency, as shown in [this](#) series of 140 photos. Notice the eye-like feature on the left.

The Weird Sky

Photo date: September 23, 2016. Photographer: Mark Mahin.

The photo below shows some purple orbs and bright white orbs above a building in New York City. Note the "vertical bias" (something I frequently see, as shown in [this](#) series). We only see orbs above the buildings, which is not the random photo positions we would see if natural particles near the camera were the cause.

The orb in the top right corner is a striped orb, as shown in this closeup. This is the 140th striped orb I have photographed (see [here](#) for other examples).

A Strange Symbol Inside Four Mysterious Orbs

The photos below show mysterious orbs I photographed over a period of three days (September 20, 2016 to September 21, 2016). All have a strange "inverted Y" symbol.

I seem to be witnessing a dramatic new phase of the orb phenomenon, one in which distinctive markings (possibly emblems or symbols) appear multiple times in different orbs. See [here](#) for about 8 other examples in which we see the same very distinctive markings repeated between 2 and 6 times in different orbs.

The inverted Y we see here resembles the lowercase version of the "lambda" letter in the Greek alphabet. Cosmologists use that symbol to represent the

Baffling Orbs With Curved Stripes

The photos below show two orbs I photographed indoors on September 20, 2016 and September 22, 2016. The bottom orb has a type of stripe called a shadow stripe, in which a thick stripe is flanked by two thin stripes. I have 18 previous times photographed orbs with these shadow stripes, as shown [here](#). I have many times previously photographed orbs with curved stripes like these, as shown [here](#).

Sky Orb With a Bent Stripe

Photo date: September 21, 2016. Photographer: Mark Mahin.

The photo below shows a sky orb with a bent stripe, a kind of angle shape that looks rather like the orbs shown in [these](#) photos (also showing orbs with bent stripes). This is the 133rd striped orb I have photographed in the air (see [here](#) for other examples).

There was no fog, mist, rain or precipitation on this night.

The 6th Time I've Seen This Very Distinctive Orb Pattern

Photo date: September 19, 2016. Photographer: Mark Mahin.

The photo below shows an orb I photographed in Grand Central Terminal in New York. It has a very distinctive stripe pattern I've seen in five other orbs I have photographed.

As reported in [this](#) post, I have seen this pattern before several times. The photo below shows some of the previous orbs I photographed with this pattern.

The top left photo above is from September 15, and the other photos are from various dates in August, 2016. Between each of these 5 photos I took more than 100 photos showing no such anomaly.

A Striped Multicolored Sky Orb

Photo date: September 18, 2016. Photographer: Mark Mahin.

The photo below shows a strange orb I photographed in the night sky. There are two strange aspects of the object: the many different colors we see in it (including green, orange, red, yellow, and purple), and the strange stripe.

There was no fog, mist, rain or precipitation when I was photographing on this night.

Triple Alignment of the Blue Orbs

Photo date: September 15, 2016. Photographer: Mark Mahin.

I took the photo below at Grand Central Terminal in New York. We see three alignments here. The top orb is aligned to the bottom orb; the top orb is aligned to an architectural line; and the bottom orb is also aligned to an architectural line. I have long noticed a tendency for orbs to align to architectural lines at this location. I don't see most orbs aligning in such a way, but I do see alignments occurring much more often than I would expect to see by chance (see [here](#) for 140+ examples). Accentuating the weirdness is a big stripe on the top orb; it is the 130th striped orb I have photographed in the air. I am seeing such stripes appearing more and more often in my photos of orbs (as you can see [here](#)).

Striped Orbs With a Similar Look

The photos below show two striped orbs I photographed, both of which have a similar-looking stripe. The first photo (taken at Grand Central Terminal) is from September 15, 2016, and the second from September 8, 2016. See [here](#) for some more impressive cases of two orbs with the same markings.

Striped Orb Has the Same "Fingerprint" Seen 4 Times Previously

Photo date: September 15, 2016. Photographer: Mark Mahin.

The photo below shows a striped orb I photographed at Grand Central Terminal in New York. Note the extremely distinctive curved stripe.

This is the fifth time I have photographed a mysterious orb with a squiggly stripe looking like this one. Here is the orb above shown with three other orbs I [have photographed](#), all with a very similar look.

Here is another orb I photographed with the same look.

A Video of Inexplicable Striped Orbs

The video below compiles many of the photos I have taken of mysterious striped orbs. First we see more than 25 photos of orbs with straight stripes stretching from one side of the orb to the other. One of these is an astonishing photo showing two striped orbs in the sky side-by-side. Then we see more than 30 photos showing orbs with curved stripes. I show three cases in which two striped orbs had the same very distinctive pattern, like some duplicated fingerprint. The video ends up by showing many examples of striped orbs that appeared while I was photographing water drops. In one jaw-dropping photo, we see more than 20 striped orbs appearing at once.

Below is a new photo of a striped orb, one that I photographed on September 12, 2016 at Grand Central Terminal in New York.

[An Orange Striped Sky Orb](#)

Photo date: September 10, 2016. Photographer: Mark Mahin.

The photo below shows a striped orb I photographed near the Chrysler Building in New York. This is the 124th mysterious striped orb I have photographed (see [here](#) for other examples). In many of these cases the stripe has looked like this one, with the stripe stretching from one side of the orb to the other.

There was no fog, mist, rain or precipitation on this night.

Paranormal Orb Has a Curved Stripe

Photo date: September 1, 2016. Photographer: Mark Mahin.

The top of the photo below shows an orb I photographed at Grand Central Terminal in New York.

The "Bird" in the Baffling Ball

Photo date: September 1, 2016. Photographer: Mark Mahin.

The photo below shows an orb I photographed above a window at Grand Central Terminal in New York. We can seem to see a silhouette showing the head of a beaked bird.

Strange Stripes on a Mysterious Orb

Photo date: July 13, 2016. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors. Notice the strange hook-like stripe. It resembles three other orbs I have photographed with hook-like stripes (as shown [here](#)).

Two Orbs at the Same Spot

I took the first photo below on September 23, 2016, and the second one on October 31, 2016. Both show a mysterious orb at the same little spot on the ceiling of Grand Central Terminal. There is a strange coincidence that a stripe on the right orb aligns with a stripe-like structural feature, so that a right angle is formed from the two.

Skygasm of the Orb Swarm

Photo date: October 26, 2016. Photographer: Mark Mahin.

The photo below (taken on a dry night) shows a huge swarm of orbs above a building in New York City. My eyes could not notice anything unusual in the air, and there was no unusual smell. A photo taken about 20 seconds later from the same angle showed not a single orb.

There was no fog, mist, rain or precipitation on this night. The air quality listed on [airnow.gov](#) was "good," with a level of 27 (anything below 50 is good). The pollen level listed on [pollen.com](#) was low, with a level of 1.1.

An orb in the top right corner of the photo has a thick stripe, although you will only notice it if you click on the photo and view it in a separate browser tab.

"Head and Shoulders"
Motif Appeared Often in
Each of 40+ Consecutive
Photos

I am not able to find a well-documented explanation of the meaning of this symbol, although one poorly documented web [site](#) claims that the inverted Y symbol is a symbol for God (as does another poorly documented [site](#)).

The photos above were taken over various days in September and October of 2016, and in between taking each of these photos I took many other photos with the same camera that showed no such anomaly. So in each case when the inverted Y symbol appeared, the previous 30 photos with the same camera showed no such anomaly.

This recurring motif is one of only many recurring motifs I have noticed in striped orbs I have photographed. You can click on the links below to see other dramatic examples. See [here](#) for the original posts that contained the photos shown above and referred to below.

The 8th Time I've Seen This "Cul-de-sac" Motif in a Mysterious Orb

The top left corner of the photo below shows an orb I photographed next to a high window in Grand Central Terminal in New York on October 21, 2016. The other seven photos show orbs I previously photographed over the past few months, as reported [here](#) and [here](#). Notice that all 8 photos have the same stripe pattern. The strange stripe looks rather like an aerial view of a winding road ending in a cul-de-sac, so I'm going to start calling this the "cul-de-sac" motif. It is one of quite a few recurring motifs that are appearing in the mysterious orbs I photograph, as shown [here](#) (another being the "inverted Y" motif I have photographed 5 times, as shown [here](#)).

The photos taken here were only 8 of thousands of photos I took during a period of a few months, and the symbol above appeared only in these photos scattered among those thousands. After each photo was taken, there were dozens of other photos that showed no such symbol.

In six of the photos, the stripe begins or ends on the edge of the orb. In the

Orbs Above the Famous Buildings

Photo date: October 21, 2016. Photographer: Mark Mahin.

The left photo shows a violet orb above St. Patrick's Cathedral in New York. The right photo shows a striped orb near the Chrysler Building. Neither was the moon, which was little more than a half-moon on this night.

There was no fog, mist, rain or precipitation on this night. The air quality listed on [airnow.gov](#) was "good," with a level of 23 (anything below 50 is good). The pollen level listed on [pollen.com](#) was low, with a level of 1.6.

Mysterious Motif: Another Orb With a Curved Shadow Stripe

The top left photo shows a mysterious orb I photographed on October 20, 2016. The other five photos shows orbs I previously photographed (they are part of [this](#) series of posts). Notice the recurrence of the arch-like curve motif. In five of these photos we see not just a stripe, but a very distinctive type of stripe that clothes makers call a shadow stripe (in which a larger stripe is flanked by a thin stripe).

Recurring Motif: The 5th Time I've Seen This "Inverted Y" Pattern in a Mysterious Orb

Photo date: October 20, 2016. Photographer: Mark Mahin.

The photo below shows an orb I photographed indoors. We see an upside-down Y pattern in the orb.

[light forms](#) (8)

[light metamorphosis](#) (108)

This is the fifth time I have photographed this upside-down Y pattern. Below are four previous orbs I photographed with the same pattern, as reported [here](#):

I am seeing the most dramatic phenomenon of recurring motifs in the orbs I photograph. See [here](#) for about 10 other examples in which we see the same very distinctive markings repeated between 2 and 6 times in different orbs.

The inverted Y we see here resembles the lowercase version of the "lambda" letter in the Greek alphabet. Cosmologists use that symbol to represent the cosmological constant, one of the key determinants of cosmic order.

The photos taken here were only 5 of hundreds of photos I took during a two-month period, and the symbol above appeared only in these 5 photos scattered among those hundreds. After each photo was taken, there were dozens of other photos that showed no such symbol.

A Blue Striped Orb

Photo date: October 13, 2016. Photographer: Mark Mahin.

The photo at left shows a blue striped orb I photographed near a window at Grand Central Terminal in New York. This is the 152th striped orb I have photographed in dry air. On the right is another orb I photographed near the same spot.

Another Blue Orb With a Curved Stripe

The photos below all show a similar structure at Grand Central Terminal, a decorative structure above a window. I took the top photo on October 11, 2016. The other two photos (reported [here](#)) were taken on October 3, 2016 and September 12, 2016. Three orbs at about the same position, all blue, and all with a curved stripe. What are the odds against such a thing coincidentally happening?

Two Sky Orbs With a Similar-Looking Stripe

The photo on the left shows a sky orb I photographed last night, October 10, 2016, a dry night. The photo on the right shows a sky orb I photographed on February 11, 2016. Both orbs have an identical-looking stripe. Both stripes start at the same position on the orb, are of the same length, and are rectangular shaped, with a straight end.

Another Blue Orb With an Arch-like Stripe on a Grand Central Window Top

The photo on the left shows a mysterious orb I photographed in Grand Central Terminal in New York on October 3, 2016. The photo on the right shows what I photographed on September 12, 2016, as reported [here](#). Both photos shows the top of a high window at the station. Not only do we see the same orb feature repeated, but the position in the station is almost identical. Both orbs are exactly aligning with an architectural feature.

Below shows the normal appearance of the area where these photos were taken.

[The 7th Time I've Photographed This Very Distinctive Paranormal Pattern](#)

The top left of the composite photo below shows a mysterious orb I photographed at Grand Central Terminal on October 3, 2016. The other photos show orbs I photographed previously, as reported [here](#). Note that all six orbs have the same squiggly pattern (a kind of "pig tail" pattern). The photos were taken over several weeks, with hundreds of photos between the photos showing no such thing.

- [pink orb in water drop](#) (2)
- [Pinterest board of orb photos](#) (1)

- [punctuation mark in orb](#) (3)
- [purple air orb](#) (481)
- [purple orb in water drop](#) (9)
- [purple orb near water drop](#) (21)
- [purple orb veil](#) (1)
- [purple striped orb](#) (1)
- [purple-red air orb](#) (1)
- [rainbow orb](#) (1)
- [reappearance of anomalous object](#) (17)
- [reappearance of orb at same spot](#) (46)
- [reappearance of orb veil with same distinctive shape](#) (3)
- [rectangular orb](#) (1)
- [rectangular UFO](#) (2)
- [recurring orb patterns](#) (3)
- [red air orb](#) (103)
- [red orb aura](#) (31)
- [red orb crescent](#) (3)
- [red orb near water drop](#) (17)
- [red orb ring](#) (1)
- [red orb stripe](#) (1)
- [red orb veil](#) (4)
- [red-blue orb](#) (1)
- [red-green orb](#) (4)
- [red-green orb in water drop](#) (1)

Below is an additional photo I took showing this pattern.

Below is a sketch I made on September 16, 2016, a sketch trying to reproduce the recurring squiggly pattern appearing on these orbs. It very closely matches the pattern on the photo taken two weeks later on October 3, 2016.

- right-angle turn of light rays (10)
- ring in orb (8)
- ring of orbs (2)
- rising light rays and falling rays from same source (1)
- S-shape of light rays (4)
- sawed orb (31)
- semi-circular orb hole (20)
- semi-circular orb veil (14)
- semi-oval orb hole (7)
- shape cloning in water drops (2)
- shell-shape orb (1)
- site for checking photo authenticity (1)
- sky line (3)
- sky orb with bright spot (1)
- sky ring (5)
- snake-like sky luminosity (4)
- snowman motif (7)
- Sony light metamorphosis photo (2)
- speeding air orb (761)
- speeding blue air orb (197)
- speeding cyan air orb (2)
- speeding green air orb (3)
- speeding half orb (2)
- speeding orange air orb (26)
- speeding orbs crossed paths (1)
- speeding ovoid (1)
- speeding peach-colored air orb (9)
- speeding pink air orb (43)
- speeding purple air orb (6)
- speeding red air orb (3)
- speeding striped orb (29)
- speeding water orb (86)
- speeding yellow air orb (16)
- spinning air orb (1)

Here is a larger version of the photo I took on October 3, 2016. It matches closely the sketch above, made two weeks earlier. Notice how the pattern ends on the exact top of the American flag.

The probability of someone getting these pattern recurrences -- these repeated "fingerprints" -- by chance arrangements of matter is less than 1 in 1,000,000,000,000. This particular repeated pattern is one of only several other very distinctive repeated patterns -- recurring emblems, we might say -- that you can see by looking at [this](#) series of posts.

Clearly this mysterious orb phenomenon is starting to become manifest in ever-more dramatic ways.

The Two Faint Stripes of the Sky Orb

Photo date: October 3, 2016. Photographer: Mark Mahin.

The photo below shows quite a pink sky orb above the Met Life building in New York. If you look closely, you can see two faint stripes on the strange orb.

There was no fog, mist, rain or precipitation on this night. The air quality listed on airnow.gov was "good."

Tree Symbol in the Orb?

Photo date: November 29, 2016. Photographer: Mark Mahin.

The mysterious orb I photographed below seems rather to have a symbol of a tree inside it. We can seem to see the trunk of the tree, and the tree top in the top right corner.

A Striped Sky Orb

Photo date: November 21, 2016. Photographer: Mark Mahin.

The photo below shows a striped orb I photographed above the Met Life building in New York. This is the 183rd striped orb I have photographed in dry air. Many of my previous photos of striped orbs (shown [here](#)) show stripes like this, in which the stripe stretches from one side of the orb to the other.

There was no fog, mist, rain or precipitation on this night.

The photo below shows a mysterious orb I photographed in midtown Manhattan.

This is the third time I have photographed an orb with this inverted V stripe. Below are two other examples, reported [here](#).

Below is my revised table listing recurring patterns I have photographed in mysterious orbs.

Description	Occurrences	Comments	URL
Inverted Y	7	Rather like the lower case lambda character, part of the Greek alphabet	http://orbpro.blogspot.com/2016/11/the-seventh-photo-ive-taken-of.html
Umbilical cord (AKA "cul-de-sac")	10	Resembles an umbilical cord with a curved loop. Is it a symbol of motherhood?	http://orbpro.blogspot.com/2016/11/the-10th-appearance-of-this-orb-motif.html
Curved stripe at top or bottom	6	May be on top or bottom of orb	http://orbpro.blogspot.com/2016/10/mysterious-motif-another-orb-with.html
Diagonal stripe	7	Goes from one side of orb to another, diagonally.	http://orbpro.blogspot.com/2016/10/two-sky-orbs-with-identical-looking.html

The 5th Sky Orb I've Photographed With This Type of Diagonal Stripe

Photo date: November 18, 2016. Photographer: Mark Mahin.

The photo below shows a striped orb I photographed to the right of St.

Still More Ringed Orbs

Patrick's Cathedral in New York. There was no fog, mist, rain or precipitation on this night.

I have four times previously photographed a sky orb that looks like this. Here are some previous photos, as described [here](#), [here](#) and [here](#)).

Below is my revised table listing recurring motifs I have photographed in mysterious orbs. Besides the 5 orbs shown above (with a diagonal stripe not stretching the full length of the orb), I have also photographed 6 other mysterious orbs with a diagonal stripe stretching the full length of the orb (see below for the link).

Description	Occurences	Comments	URL

Striped Orb Appears While I'm Watching the Ghost Show

Photo date: November 13, 2016. Photographer: Mark Mahin.

The photo below shows a mysterious striped orb I photographed above my TV while I was watching the TV show "Haunted Case Files."

This looks quite a bit like another recurrence of the "hose and circle" recurring orb motif I have photographed six times before (as shown [here](#)). But it's a borderline case, since the "circle" part below the "hose" is only barely visible.

The Seventh Photo I've Taken of a Mysterious Orb With an Inverted-Y Symbol

Photo date: November 2, 2016. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed in Grand Central Terminal in New York.

This is the 7th time I have photographed an upside-down Y in a mysterious orb. The composite photo below shows six other orbs I have photographed with the same inverted Y symbol (see [here](#) and [here](#) for the original posts). The photos were taken over the course of quite a few weeks, with no such symbol appearing in 99% of the photos I took during these weeks.

- [orb with glasses](#) (1)
- [orb with green edge](#) (1)
- [orb with hair](#) (1)
- [orb with hole](#) (188)
- [orb with hole and ring](#) (1)
- [orb with internal arcs](#) (1)
- [orb with letter](#) (42)
- [orb with long tail](#) (5)
- [orb with multiple colors](#) (3)
- [orb with number](#) (16)
- [orb with rainbow face](#) (2)
- [orb with rectangular feature](#) (5)
- [orb with rectangular hole](#) (5)
- [orb with red feature near center](#) (2)
- [orb with single big eye](#) (3)
- [orb with six holes](#) (1)
- [orb with small ring](#) (12)
- [orb with spot](#) (29)
- [orb with square](#) (2)
- [orb with three holes](#) (66)
- [orb with tongue](#) (2)
- [orb with triangle](#) (9)
- [orb with triangular eye](#) (1)
- [orb with triangular hole](#) (6)
- [orb with triple stripe](#) (1)
- [orb with two holes](#) (157)
- [orb zone theory](#) (20)
- [orb zone theory debunked](#) (2)
- [orbs and alien abductions](#) (1)
- [orbs and near-death experiences](#) (2)
- [orbs at Hall of Science](#) (1)
- [orbs forming a letter](#) (2)
- [orbs forming a number](#) (3)
- [orbs forming right angle](#) (2)
- [orbs forming semi-circle](#) (2)

Below is my revised table listing different types of recurring orb motifs I have photographed.

Description	Occurrences	Comments	URL
Inverted Y	7	Rather like the lower case lambda character, part of the Greek alphabet	This post
Umbilical cord (AKA "cul-de-sac")	10	Resembles an umbilical cord with a curved loop. Is it a symbol of motherhood?	http://orbpro.blogspot.com/2016/11/the-10th-appearance-of-this-orb-motif.html
Curved stripe at top or bottom	6	May be on top or bottom of orb	http://orbpro.blogspot.com/2016/10/mysterious-motif-another-orb-with.html
Diagonal stripe	6	Goes from one side of orb to another, diagonally. Looks like a slash (not a backslash)	http://orbpro.blogspot.com/2016/10/two-sky-orbs-with-identical-looking.html

The 10th Appearance of This Orb Motif: Is It a Psychic Symbol of Motherhood?

Photo date: November 2, 2016. Photographer: Mark Mahin.

Below is a photo I took of the ceiling of Grand Central Terminal in New York. I have 9 previous times photographed orbs with this very distinctive pattern.

[right-angle turn of light rays](#) (10)

Below is a composite showing this orb and 9 other orbs I have photographed with the same pattern. You can see the original posts [here](#). The photos were taken over the course of quite a few weeks, with no such symbol appearing in 99% of the photos I took during these weeks.

In trying to unravel any meaning behind such a symbol, I feel rather like Robert Langdon, the chief protagonist of the "Da Vinci Code" series of novels. Langdon is a professor of "symbolology" who must unravel cryptic symbols.

I originally called the recurring motif shown above "the cul-de-sac motif," because I thought it resembled an aerial view of a winding road leading to a cul-de-sac. But now I think it resembles something else: an umbilical cord. We see a loop in the stripe, and umbilical cords sometimes become looped in the womb.

Imagine if you had the job of creating a symbol of motherhood, using only a small number of pixels. It wouldn't work to draw a nursing mother -- that would require too many pixels. Nor would it work to draw a breast or a vagina, for women have those even when they are not mothers.

But it occurs to me: you could symbolize motherhood by using a single brush stroke. You would simply draw a symbol just like the one above, which would symbolize a mother's umbilical cord. The only women with umbilical cords are mothers.

If this symbol represents an umbilical cord, it creates all kind of fascinating

The "Wave" in the Weird Wonder

Photo date: November 2, 2016. Photographer: Mark Mahin.

The photo below shows a strange orb I photographed indoors. The orb has a stripe with a wave-like look to it. This is the 169th striped orb I have photographed in dry air.

Two More Cases of This Recurring Orb Pattern

The top left photo shows a mysterious orb I photographed on October 14, 2016. Below that on the left is an orb I photographed on November 4, 2016 at Grand Central Terminal. The other four photos are orbs I previously photographed and described in [this](#) post and [this](#) post. In all six of these

[yellowish-orange orb veil](#) (3)

[zig-zag stripe in orb](#) (1)

photos, we see the same pattern: a stripe stretching down from the top of the orb, with a circle feature underneath the end of the stripe. I call this the "hose and circle" pattern. It looks rather like a ball falling out of a tube.

This recurring pattern is one of only quite a few I have identified. The table below shows other examples of recurring patterns in orbs I have photographed.

Description	Occurrences	Comments	URL
Inverted Y	6	Rather like the lower case lambda character, part of the Greek alphabet	http://orbpro.blogspot.com/2016/10/the-6th-time-ive-seen-this-inverted-y.html
Cul-de-sac	9	Looks like an aerial view of a winding road leading to a cul-de-sac.	http://orbpro.blogspot.com/2016/11/same-flag-top-same-curvey-striped-cul.html
Curved stripe at top or bottom	6	May be on top or bottom of orb	http://orbpro.blogspot.com/2016/10/mysterious-motif-another-orb-with.html
Diagonal stripe	6	Goes from one side of orb to another, diagonally. Looks like a slash (not a backslash)	http://orbpro.blogspot.com/2016/10/two-sky-orbs-with-identical-looking.html

Below are 8 photos I have taken showing the same "cul-de-sac" pattern (one of which is the photo at right above). See [here](#) for the original posts.

Astonishingly, on the same day I photographed yet another orb showing this "cul-de-sac" pattern, as clearly as on the photo at the top right of this post. I'll post that photo on another day.

Here is my revised table listing recurring orb motifs I have photographed (only those I have published so far).

Another Sky Orb With a Diagonal Slash

Photo date: January 6, 2017. Photographer: Mark Mahin.

The photo below shows a sky orb I photographed on a dry night with no fog, mist, rain or precipitation. Like 12 other orbs I have photographed, there is a diagonal stripe in the orb, like a slash.

Below are 10 other orbs I have photographed with a similar stripe.

The 200th Striped Orb I've Photographed in Dry Air

Photo date: January 4, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious striped orb I photographed indoors. This is the 200th striped orb I have photographed in dry air (as shown in [this](#) series). In addition, I have photographed about 200 other striped orbs while photographing falling water drops, as shown in [this](#) series.

Striped Orb Shows Up for the Ghost Documentary

Photo date: January 4, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb that appeared to the right of my TV set while I was watching the "Ghostly Encounters" TV show, in which people discuss ghostly paranormal experiences.

This is the 12th time I have photographed an orb with a thick diagonal stripe resembling the slash character. Below are 10 other examples. You can see the original photos [here](#).

Below is my revised table listing recurring patterns I have noticed in mysterious orbs I have photographed. You can conveniently see almost all of the relevant photos in [this](#) post.

The 10th Time I've Photographed a Diagonal Slash Orb

Below is a composite of photos I have taken of mysterious orbs with a stripe looking like a diagonal slash. The second photo in the third column is a new photo I took on yesterday, December 16, 2016. All of these photos were taken either indoors or outdoors on dry nights with no fog, mist, rain or precipitation. The original posts containing most of the photos below are [here](#).

Below is my revised table showing recurring patterns I have observed in mysterious orbs. You can see almost all of the examples of these patterns by opening [this](#) post.

- [orb on escalator](#) (1)
- [orb on Mars](#) (1)
- [orb on orb](#) (4)
- [orb on roof](#) (42)
- [orb on row of Grand Central lights](#) (63)

The Seventh Occurrence of This Distinctive Pattern in a Mysterious Orb

Photo date: December 13, 2016. Photographer: Mark Mahin.

The photo below shows a mysterious striped orb I photographed.

This is the seventh time I have photographed a mysterious orb with this particular pattern, which I call the "hose and circle" pattern. Below are other examples I photographed on various days this year. In each case we see what looks like a ball or circle that is underneath a kind of hose shape, so it looks like a ball that has fallen out of the hose.

- [orb with glasses](#) (1)
- [orb with green edge](#) (1)
- [orb with hair](#) (1)
- [orb with hole](#) (188)
- [orb with hole and ring](#) (1)
- [orb with internal arcs](#) (1)
- [orb with letter](#) (42)
- [orb with long tail](#) (5)
- [orb with multiple colors](#) (3)
- [orb with number](#) (16)
- [orb with rainbow face](#) (2)
- [orb with rectangular feature](#) (5)
- [orb with rectangular hole](#) (5)
- [orb with red feature near center](#) (2)
- [orb with single big eye](#) (3)
- [orb with six holes](#) (1)
- [orb with small ring](#) (12)
- [orb with spot](#) (29)
- [orb with square](#) (2)
- [orb with three holes](#) (66)
- [orb with tongue](#) (2)
- [orb with triangle](#) (9)
- [orb with triangular eye](#) (1)
- [orb with triangular hole](#) (6)
- [orb with triple stripe](#) (1)
- [orb with two holes](#) (157)
- [orb zone theory](#) (20)
- [orb zone theory debunked](#) (2)
- [orbs and alien abductions](#) (1)

Strange Sky Orbs

Photo date: December 6, 2016. Photographer: Mark Mahin.

The photo below shows two mysterious orbs I photographed in the sky. The one on the left rather seems to have two eye-like features. The one on the right has a strange stripe, as well as a variety of colors: yellow, green, blue and purple. Neither was the moon, which was only a half-moon on this night.

There was no fog, mist, rain or precipitation when these photos were taken.

Another Mysterious Orb With a Belt-Like Stripe

Photo date: March 1, 2017. Photographer: Mark Mahin.

The photo shows a mysterious blue orb I photographed at Grand Central Terminal in New York.

Note the stripe stretching across the orb like some belt. This is the eighth time I have photographed an orb with such a belt-like stripe. Below we see all eight of these orbs (you can see the original posts [here](#)).

The 14th Mysterious Orb With a Diagonal Slash

Photo date: February 19, 2017. Photographer: Mark Mahin.

Below is a sky orb orb I photographed on a night with no rain, fog, mist or precipitation.

I have so far taken 14 photos of mysterious orbs that had a diagonal slash that goes from one side of the orb to another, with a resemblance to a slash rather than a backslash. Below are ten of the photos. You can see the original posts in which I published these photos [here](#).

The Three Weird Things About This Orb

Photo date: February 16, 2017. Photographer: Mark Mahin.

The photo below shows a strange orb I photographed near a high window in Grand Central Terminal. We see an odd flat edge that I don't very often see in orbs. There's also a thick stripe. One side of the orb has a kind of blue glow, and the other side of the orb has a yellow-green glow.

Night of the Backslash Sky Orbs

Photo date: February 11, 2017. Photographer: Mark Mahin.

I took the top left photo on an earlier day, and the three other photos on this night. All four orbs have a diagonal stripe resembling a backslash. I have photographed 11 other orbs with a diagonal slash in the other direction (as you can see by following a link given below).

There was no fog, mist, rain or precipitation on this night. This pattern recurrence is one of only 14 that I have documented. Below is my updated table listing recurring patterns in mysterious orbs I have photographed (most of the examples referred to below can be conveniently seen in [this post](#)).

Striped Sky Strangeness

Photo date: February 11, 2017. Photographer: Mark Mahin.

In the photo below we see a weird colored sky orb with a strange stripe. This is the 213th striped orb I have photographed in dry air (as shown in [this](#) series). In addition, I have photographed about 200 other striped orbs while photographing falling water drops, as shown in [this](#) series.

There was no fog, mist, rain or precipitation on this night.

The 9th Time I've Photographed This Pattern in a Mysterious Orb

Photo date: February 8, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed in front of the ceiling of Grand Central Terminal in New York.

This is the ninth time I have photographed a mysterious orb with a pattern looking like this, in which we see a small circle shape underneath a thick vertical stripe stretching from the top of the orb down to about the center of the orb. Below are 8 other orbs I have photographed with the same pattern, which rather resembles an exclamation mark.

- [orb with glasses \(1\)](#)
- [orb with green edge \(1\)](#)
- [orb with hair \(1\)](#)
- [orb with hole \(188\)](#)
- [orb with hole and ring \(1\)](#)
- [orb with internal arcs \(1\)](#)
- [orb with letter \(42\)](#)
- [orb with long tail \(5\)](#)

- [orb with number \(16\)](#)
- [orb with rainbow face \(2\)](#)
- [orb with rectangular feature \(5\)](#)
- [orb with rectangular hole \(5\)](#)
- [orb with red feature near center \(2\)](#)
- [orb with single big eye \(3\)](#)
- [orb with six holes \(1\)](#)
- [orb with small ring \(12\)](#)
- [orb with spot \(29\)](#)
- [orb with square \(2\)](#)
- [orb with three holes \(66\)](#)
- [orb with tongue \(2\)](#)
- [orb with triangle \(9\)](#)
- [orb with triangular eye \(1\)](#)
- [orb with triangular hole \(6\)](#)
- [orb with triple stripe \(1\)](#)
- [orb with two holes \(157\)](#)
- [orb zone theory \(20\)](#)
- [orb zone theory debunked \(2\)](#)

Another "Hockey Stick" Sky Orb

Photo date: February 6, 2017. Photographer: Mark Mahin.

The photo at left (taken on a dry night with no fog, mist rain or precipitation) shows a sky orb I photographed with a stripe resembling a hockey stick. The photo on the right shows another "hockey stick" orb I photographed in 2016, as noted in [this](#) post.

I have added this pattern to my table below listing recurring patterns in mysterious orbs (most of the examples referred to below can be conveniently seen in [this](#) post).

Bright Anomaly

Photo date: February 2, 2017. Photographer: Mark Mahin.

The photo below shows a bright orb I photographed at Grand Central Terminal in New York.

When orbs are this bright, they aren't very transparent. Below we see a much less bright orb I photographed on January 31, 2017, one that is much more transparent.

Recurrence of the "Slanted C" Pattern in Mysterious Orbs

Photo date: January 19, 2017. Photographer: Mark Mahin.

The photo below shows a striped orb I photographed at Grand Central Terminal in New York.

This is the 11 time I have photographed a mysterious orb with a stripe looking like this one, with a stripe looking a letter C slanted to the right. Below are 10 other examples.

Below is my revised table showing recurring patterns I have observed in mysterious orbs. You can see almost all of the examples of these patterns by opening [this](#) post.

High Enigma of the Striped Orb

Photo date: January 18, 2017. Photographer: Mark Mahin.

The photo below shows a striped orb I photographed in Grand Central Terminal in New York.

Below is a closeup showing the strange stripe on the orb. We see what clothes makers call a "shadow stripe," something I have 26 times previously observed in mysterious orbs, as shown [here](#).

Below are six other mysterious orbs I have photographed with a similar curved stripe at the top or bottom. Five of these also have a "shadow stripe."

Below is my revised table showing recurring patterns I have observed in mysterious orbs. You can see almost all of the examples of these patterns by opening [this](#) post.

A Strange Striped Orb

Photo date: March 20, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious striped orb I photographed at Grand Central Terminal in New York. This is the 248th mysterious striped orb I have photographed in dry air.

Baffling Backslash Balls

The photo below shows two mysterious orbs that I photographed in the sky on March 16, 2017 and March 17, 2017. Both have a diagonal stripe that resembles a backslash.

There was no fog, mist, rain or precipitation on either of these nights.

This is the sixth time I have photographed a mysterious orb with this type of backslash stripe. Conversely, I have 18 times photographed mysterious orbs with a diagonal stripe in the opposite direction (orbs with a stripe that makes a slash rather than a backslash).

Below is my revised table of repeating patterns in mysterious orbs (most of the examples referred to below can be conveniently seen in [this](#) post).

Description	Occurrences	Comments	URL

The Orb With a Diagonal Slash Inside the Orb With a Diagonal Slash

Photo date: March 17, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed in the sky. Like 17 other mysterious orbs I have photographed (as shown [here](#)), the purple orb has a diagonal stripe resembling a slash. What is amazing here is that we see in the exact center of the orb another orb which also has a diagonal

The 17th Mysterious Orb With a Diagonal Slash

Photo date: March 16, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed at the edge of a park area in New York City.

There was no fog, mist, rain or precipitation on this night.

This is the 17th mysterious orb I have photographed with a diagonal slash feature. Shown below are ten other examples.

Startling Spheres

Photo date: March 10, 2017. Photographer: Mark Mahin.

The photo below shows some mysterious blue orbs I photographed in Grand Central Terminal in New York. Both of the two orbs on the left seem to have vertical stripes.

The 15th Mysterious Orb With a Diagonal Slash

Photo date: March 5, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed on a dry night with no fog, mist, rain or precipitation.

This is the 15th time I've photographed a mysterious orb with such a slash. Below are 10 of the other photos.

Members of the Same Orb Species?

The photos below show two mysterious striped orbs I photographed at Grand Central Terminal in New York, on March 6, 2017 and January 6, 2017. Both orbs have curved stripes at their bottoms.

These are the 10th and 11th orbs I have photographed with a curved stripe at the bottom or top.

Below is my revised table of repeating patterns in mysterious orbs (most of the examples referred to below can be conveniently seen in [this post](#)).

The "Slanted C" Orb Pattern Keeps Recurring

The photo on the left shows a mysterious orb I photographed at Grand Central Terminal in New York on February 27, 2017, which looks like the similar orb on the right I photographed a month earlier.

This is the 12th time I have photographed a mysterious orb with a stripe that looked like the character "C" slanted over to the right. Below are ten other examples.

Striped Orbs Appear at Same Spot

Photo date: March 3, 2017. Photographer: Mark Mahin.

The two photos below show mysterious orbs that I photographed above windows at Grand Central Terminal in New York. These are the 225th and 226th striped orbs I have photographed in dry air. See [here](#) for other examples.

The orb on the right looks very much like the three orbs shown in [this](#) post.

Another Backslash Sky Orb

Photo date: April 10, 2017. Photographer: Mark Mahin.

The photo below shows a sky orb I photographed with a stripe resembling a backslash. This is the seventh mysterious orb I have photographed with a backslash stripe in its middle (I've also photographed 22 mysterious orbs with slash stripes in the middle).

There was no fog, mist, rain or precipitation on this night.

The visual below summarizes 19 patterns I have observed in mysterious orbs I have photographed. Examples of the patterns can be conveniently seen in [this post](#).

The "Corner Chord" Orb Pattern

In geometry a chord is a line connecting two points on a curve. The photos below all show mysterious orbs I photographed that have chord stripes in one of the corners of the orb.

Two B's in This Striped Orb

Photo date: April 7, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed at Grand Central Terminal in New York. Besides a strange stripe, there are two letter B's you can see if you look closely and tilt your head a bit to the left. One of the B's is below the center of the stripe, while another is above the center of the stripe.

This is the third time I have photographed a mysterious orb with this pattern, which I call the "two-thirds of a Y" pattern (because it looks like a Y missing its left third). Below are two other examples of the same pattern.

Why Mysterious Orbs Aren't Like Snowflakes

Photo date: April 3, 2017. Photographer: Mark Mahin.

The photo below (taken on a dry night) shows the 22nd mysterious orb I have photographed with a diagonal stripe stretching from a top edge of the orb to a bottom edge of the orb. See [here](#) for the 21 other examples.

So mysterious orbs are not like snowflakes, which never repeat their patterns. Mysterious orbs, on the other hand, keep repeating patterns over and over again. You can see all the patterns in [this](#) post.

The visual below summarizes the repeating patterns I have photographed in mysterious orbs.

She Photographed a Striped Orb While Investigating a Crop Circle

Regular readers of this blog will know that I photograph mysterious striped orbs with great frequency (I have photographed more than 260 such striped orbs, as shown [here](#)). I just read an article about crop circle researcher Patty Greer. The [article](#) has a photo of a mysterious striped orb photographed by Greer while she was investigating a crop circle. The orb has an outer ring or "membrane" like I [frequently photograph](#) in orbs. Her photo resembles the orb photo I took below on March 31, 2017; in both we see a horizontal stripe stretching halfway across the orb, making a kind of "half belt" in the middle of the orb. Which raises the question: are orbs and crop circles caused by the same mysterious reality?

On [this](#) page Greer has a very interesting film about people who saw orange orbs near a crop circle. She also has [this](#) beautiful photo of a multicolored striped orb.

Moustache in the Orb Face?

Photo date: March 31, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed in front of an arch at Grand Central Terminal in New York. The orb has a stripe, which I've seen hundreds of times in orbs I've photographed. What is remarkable here is how the visual elements come together to make a face-like appearance. It is as if we could see a face with two eyes, a nose, a mouth, and a great big moustache. In this case the "eyes" are part of the arch that we can see through the transparent orb.

The Third "J" Letter I've Photographed in a Mysterious Orb

Photo date: March 30, 2017. Photographer: Mark Mahin.

Below is a photo I took showing a mysterious orb near a window in Grand Central Terminal.

Note that the stripe in this orb makes a "J" shape. As shown [here](#), two days earlier I had photographed a mysterious orb that also had such a "J" stripe. Below we see both of these orbs, along with a similar orb I photographed on June 22, 2016, as shown [here](#).

The Orb's Shadow Stripe

Photo date: March 28, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed at Grand Central Terminal in New York. We see not just a stripe on the orb, but a particular type of stripe known as a shadow stripe, in which there are thin lines above and below the stripe, matching the shape of the stripe. I have 28 times previously photographed mysterious orbs with these shadow stripes (as shown [here](#)).

The 21st Mysterious Orb I've Photographed With a Slash Stripe

Photo date: March 24, 2017. Photographer: Mark Mahin.

Below we see a striped orb I photographed in the night sky, on a night with no fog, mist, rain or precipitation.

This is the 21st time I have photographed a mysterious orb with this type of diagonal slash feature (see [here](#) for the original posts). Below are ten other examples I photographed.

[right-angle turn of light rays](#) (10)

A Mark So Mysterious

Photo date: March 24, 2017. Photographer: Mark Mahin.

The photo below shows a striped orb I photographed in the night sky. It looks very much like 19 other mysterious orbs I have [photographed](#) with diagonal slash stripes.

There was no fog, mist, rain or precipitation on this night.

A Striped Sky Orb

Photo date: May 16, 2017. Photographer: Mark Mahin.

The photo below shows a striped orb I photographed above a construction site. It's one of hundreds of striped sky orbs I have photographed (see [here](#) for examples).

There was no fog, mist, rain or precipitation on this night.

Curved Stripe of the Speeding Blue Orb

Photo date: May 17, 2017. Photographer: Mark Mahin.

The photo below shows a speeding blue orb I photographed at Grand Central Terminal in New York, one of many speeding blue orbs I have photographed at this location. On the left we see a curved stripe.

This is the sixth time I have photographed a mysterious orb with a curved stripe on its side. This pattern is one of 20 recurring patterns I have noticed in mysterious orbs I have photographed. The visual below shows these patterns (see [here](#) for a post that shows lots of examples of most of these patterns).

The 24th and 25th Mysterious Orbs With Slash Stripes

The photos below show two mysterious orbs I photographed in the sky on May 9, 2017 and April 29, 2017 (two dry nights with no fog, mist, rain or precipitation).

These are the 24th and 25th mysterious orbs I have photographed with a stripe looking like these two stripes (a stripe stretching from the top right of the orb to the bottom left of the orb). See [here](#), [here](#), and [here](#) to see the other 23 examples.

The visual below summarizes 20 patterns I have observed in mysterious orbs I have photographed. The numbers show how many examples I have seen of each pattern. Examples of each of the patterns can be conveniently seen in [this](#) post.

The number of orb pattern repetitions I am getting is so very high that coincidence is ruled out. We would not expect any observer in the universe to see this many pattern repetitions due to coincidence, partially because there

are a trillion ways in which random marks might appear on an orb. I can think of two possibilities to explain such pattern repetitions. The first possibility is that mysterious orbs sometimes belong to different "species" or types, and that particular types have distinctive visual characteristics (just as particular animals have distinctive visual characteristics, like the stripes of a tiger or the spots of a leopard). The second possibility is that some kind of signalling or symbolism is going on, and that these pattern repetitions are repetitions of distinctive signals or symbols (similar to the pattern repetition that occurs when the letters of an alphabet repeatedly occur).

Striped Sky Orbs Look Like Twins

The photos below show two mysterious orbs I photographed on April 10, 2017 and April 28, 2017 (two nights where there was no fog, mist, rain or precipitation).

The orb has the "corner chord" pattern I have 10 times previously photographed (as you can see [here](#) and [here](#)).

Below is my revised table of 20 repeating patterns in mysterious orbs I have photographed (most of the examples referred to below can be conveniently seen in [this](#) post).

Description	Cases	Comments	URL
Inverted Y	7	Rather like the lower case lambda character, part of the Greek alphabet	http://orbpro.blogspot.com/2016/11/the-seventh-photo-ive-taken-of.html
Umbilical cord (AKA "cul-de-sac")	10	Resembles an umbilical cord with a curved loop. Is it a symbol of motherhood?	http://orbpro.blogspot.com/2016/11/the-10th-appearance-of-this-orb-motif.html
Curved stripe at top or bottom	10	May be on top or bottom of orb	http://orbpro.blogspot.com/2017/01/high-enigma-of-striped-orb.html http://orbpro.blogspot.com/2016/07/more-striped-orbs_18.html http://orbpro.blogspot.com/2017/04/occurrence-10-of-this-orb-pattern.html http://orbpro.blogspot.com/2017/02/the-9th-time-ive-seen-this-orb-pattern.html

A Striped Speeding Orb

Photo date: April 26, 2017. Photographer: Mark Mahin.

The photo on the left shows a striped speeding orb I photographed at Grand Central Terminal in New York. This is the 290th striped orb I have photographed in dry air (see [here](#) for the other 289 photos). The photo on the right (cropped from the rightmost edge of a larger photo) shows another speeding orb I photographed at the same location.

The 23rd Diagonal Slash Stripe in a Mysterious Orb

Photo date: April 21, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb photographed in the sky on a dry night. It is the 23rd mysterious orb I have photographed with a diagonal slash stretching from one end of the orb to the other. I see this pattern recurring more often than any other of the recurring orb patterns I observe.

The visual below summarizes 20 patterns I have observed in mysterious orbs I have photographed. Examples of the patterns can be conveniently seen in

Freaky But Familiar

The photos below show mysterious striped orbs I photographed on April 13, 2017 and April 17, 2017. The one on the left has an inverted V pattern that I have photographed 5 times previously, as shown [here](#). The one on the right has a pattern I call the "corner chord" pattern. I have 9 times previously photographed such a pattern, as shown [here](#).

The visual below summarizes 20 patterns I have observed in mysterious orbs I have photographed. Examples of the patterns can be conveniently seen in [this](#) post.

Cylinder in the Weird Orb?

Photo date: April 17, 2017. Photographer: Mark Mahin.

The photo below shows a most unusual orb I photographed at Grand Central Terminal in New York. The left part of the orb looks like a short cylinder viewed from above. Very, very strange. I have photographed this spot very many times before, and my photos have never shown such a shape, inside or outside of an orb.

The photo above was cropped from the larger photo below.

"Side Curve" Orbs

The top two photos below show mysterious orbs I photographed on April 9, 2017. The bottom two photos show similar-looking mysterious orbs I photographed on previous days. The orbs all have curved stripes on their left or right sides.

This "side curve" pattern is the 20th recurring pattern I have noticed in mysterious orbs I have photographed. The visual below summarizes these 20 patterns, and shows how many times I have photographed each pattern. Many examples of these patterns can be seen in the post [here](#).

Another Mysterious Orb with a T Shape

Photo date: June 24, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors. The orb has a T-shape inside it (the T-shape is slightly slanted to the right).

The mysterious orb I photographed in the photo below (from [this](#) post) also has a T-shape.

This is the 21st recurring pattern I have classified in mysterious orbs I have photographed. The visual below shows these patterns (see [here](#) for a post that shows multiple examples of all of these patterns).

Striped Enigma

Photo date: June 21, 2017. Photographer: Mark Mahin.

The photo below shows a striped orb I photographed indoors.

This is the 14th time I have photographed a mysterious orb with a straight stripe in one corner or side of the orb. This is one of 20 recurring patterns of mysterious orbs that I have classified. The table below lists each type, and the number of occurrences of each type.

Confounding Chord

Photo date: June 18, 2019. Photographer: Mark Mahin.

In geometry a chord is a line connecting two points on a curve. I have 13 times photographed mysterious orbs with a chord stripe in one of the corners of the orb. Below is the 13th and latest case of this orb pattern, photographed on a night with no fog, mist, rain or precipitation.

Below are 9 other times I photographed this "corner chord" pattern.

Below are three more orbs with this pattern.

This "corner chord" pattern is one of 20 recurring patterns I have noticed in mysterious orbs I have photographed. The visual below shows these patterns

[dolphin-headed orb \(1\)](#)

The Math Symbol in the Mysterious Orb

Photo date: June 2, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed in Grand Central Terminal in New York (the background is the green ceiling of the station). The orb has what looks exactly like the mathematical symbol for "less than." Looking at how neat and regular the lines are, it seems unthinkable that we are looking at something random. I have never seen this symbol in an orb before, although I have photographed 300+ other orbs with stripes (as shown [here](#)).

[orb stairway](#) (1)

[orb string of pearls](#) (96)

[orb stripe with two lines](#) (2)

[orb swarm](#) (137)

[orb swords](#) (1)

photographed with a stripe resembling a hook or a cane. See [here](#) for five other examples of orbs with this type of hook-like stripe. What is remarkable here is how the orb's stripe seems to blend seamlessly with an architectural line in the station, making it look as if the station's structural stripe had stretched outward to become an orb stripe. It's a kind of positional synchronicity astonishingly unlikely to happen by chance.

This hook-stripe pattern is one of 20 recurring patterns I have noticed in mysterious orbs I have photographed. The visual below shows these patterns (see [here](#) for a post that shows lots of examples of most of these patterns).

- [orb symmetry](#) (1)

Stripes of the Strange Orbs

Below are four striped orbs that I photographed indoors on May 23, 2017, May 26, 2017, and May 29, 2017. With these photos I have now photographed 313 striped mysterious orbs in dry air.

The one on the bottom right is the fourth time I have photographed a mysterious orb with a J-shape inside it. Below are three other orbs with such a J-shape.

- [orb with glasses](#) (1)
- [orb with green edge](#) (1)
- [orb with hair](#) (1)
- [orb with hole](#) (188)
- [orb with hole and ring](#) (1)
- [orb with internal arcs](#) (1)
- [orb with letter](#) (42)
- [orb with long tail](#) (5)
- [orb with multiple colors](#) (3)
- [orb with number](#) (16)
- [orb with rainbow face](#) (2)
- [orb with rectangular feature](#) (5)
- [orb with rectangular hole](#) (5)
- [orb with red feature near center](#) (2)
- [orb with single big eye](#) (3)
- [orb with six holes](#) (1)
- [orb with small ring](#) (12)
- [orb with spot](#) (29)
- [orb with square](#) (2)
- [orb with three holes](#) (66)
- [orb with tongue](#) (2)
- [orb with triangle](#) (9)
- [orb with triangular eye](#) (1)
- [orb with triangular hole](#) (6)
- [orb with triple stripe](#) (1)
- [orb with two holes](#) (157)

Species of Strangeness

I took the photos below on April 2, 2017, April 5, 2017, May 3, 2017, May 27, 2017, and May 28, 2017. We see six mysterious orbs, two of which have an almost identical mark on their top right corners. The one on the bottom right has a strange stripe resembling an upside-down U.

The "Belt" of the Baffling Ball

Photo date: May 26, 2017. Photographer: Mark Mahin.

The top photo below shows a mysterious orb I photographed indoors. Note the strange belt-like feature, which looks almost identical to the stripe in the orb shown in the lower photo (one I took on March 23, 2017, as posted [here](#)). This is the 15th time I have photographed a belt-like stripe in a mysterious orb. See [here](#) for the other 14 examples.

[striped yellow orb](#) (12)

[stripes orb with shadow stripe](#) (1)

Below is my revised table of 20 repeating patterns in mysterious orbs I have photographed (most of the examples referred to below can be conveniently seen in [this](#) post).

Description	Cases	Comments	URL
Inverted Y	7	Rather like the lower case lambda character, part of the Greek alphabet	http://orbpro.blogspot.com/2016/11/the-seventh-photo-ive-taken-of.html
Umbilical cord (AKA "cul-de-sac")	10	Resembles an umbilical cord with a curved loop. Is it a symbol of motherhood?	http://orbpro.blogspot.com/2016/11/the-10th-appearance-of-this-orb-motif.html
Curved stripe at top or bottom	10	May be on top or bottom of orb	http://orbpro.blogspot.com/2017/01/high-enigma-of-striped-orb.html http://orbpro.blogspot.com/2016/07/more-striped-orbs_18.html http://orbpro.blogspot.com/2017/04/occurrence-10-of-this-orb-pattern.html http://orbpro.blogspot.com/2017/02/the-9th-time-ive-seen-this-orb-pattern.html
Diagonal stripe	25	Goes from one side of orb to another, diagonally. Looks like a slash (not a backslash)	http://orbpro.blogspot.com/2017/03/the-21st-mysterious-orb-ive.html http://orbpro.blogspot.com/2017/04/why-mysterious-orbs-arent-like.html http://orbpro.blogspot.com/2017/04/the-23rd-diagonal-slash-stripe-in.html http://orbpro.blogspot.com/2017/05/the-24th-and-25th-

Strange Orbs

Below we see two odd looking orbs I photographed indoors on May 20, 2017.

The one below appeared on May 15, 2017, a few seconds after I complained that I hadn't had a striped orb appear recently.

The one below from April 27, 2017 seemed to be moving fast.

The 4th Time I've Seen This Orb Pattern

Photo date: May 20, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed at Grand Central Terminal in New York.

We see here a pattern I have three times previously photographed, a pattern I call the "T with slanted top" pattern, because it resembles the letter "T" with a slanted top, and a small break between the lines. Below are the three other times I have photographed this pattern.

This pattern is one of 20 recurring patterns I have noticed in mysterious orbs I have photographed. The visual below shows these patterns (see [here](#) for a

post that shows lots of examples of most of these patterns).

Mysterious Striped Orbs

The grid below shows various mysterious striped orbs that I have photographed over the past few months. See [here](#), [here](#), [here](#), [here](#), [here](#), and [here](#) to see five other similar posters of striped orbs.

A Striped Transparent Blue Orb

Photo date: August 28, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious blue orb I photographed in Grand Central Terminal in New York. The stripe feature in the lower half of the orb was not part of the window.

A photo from July 25, 2017 shows the same window with another orb near it.

More Striped Orbs

The photos below show mysterious striped orbs I photographed on July 31, 2017, August 23, 2017, and August 19, 2017. They are some of 359 mysterious striped orbs I have photographed in dry air (see [here](#) for similar photos).

More Orb Pattern Repetitions

Photo date: August 23, 2017. Photographer: Mark Mahin.

The photos below show more examples of the recurring patterns in mysterious orbs. The one on the left is the 17th example of a pattern I call the "corner chord" pattern. The one on the right is the 11th example of a pattern I call the "curved stripe at top or bottom" pattern.

These patterns are two of 21 recurring patterns I have noticed in mysterious orbs I have photographed. The grid below summarizes each of these patterns, and how many times each have been photographed. Click [here](#) to see multiple examples of each of these patterns.

The Weird Orb's Odd Features

Photo date: August 23, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed in Grand Central Terminal in New York, one of 600+ blue orbs I have photographed at this location. We see a curving stripe and a dot inside the orb, which together make what looks rather looks an animal face in profile.

Did the Orb's "L" Stand for "Love"?

Photo date: July 28, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors. The orb has a stripe resembling the letter "L." This is one of quite a few mysterious orbs I have photographed with a letter shape inside the orb. As shown [here](#), I have photographed orbs that had inside them a "J," a "U," a "T," an "N," an "E," an "F" and an "M."

Orb Stripe Patterns Keep Recurring

Photo date: July 10, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors. We see two strange stripes on the orb.

The lower stripe is another occurrence of the "corner chord" pattern I have 15 times previously photographed, as shown in these examples (each of which has a [chord](#) in the corner of the orb):

Sinuuous Stripe of the Mysterious Orb

Photo date: July 6, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors. We see a strange stripe, one that takes a curvy, meandering path, like some winding river. See [here](#) for 300+ other photos of striped orbs.

More Striped Orbs

The photos below show mysterious orbs I photographed on July 3, 2017 and June 19, 2017. The one on the left has a stripe that almost resembles the number 6.

New Video: 21 Recurring Patterns in Mysterious Orbs

I have photographed 300+ mysterious striped orbs, as you can see in [this](#) series of 300+ photos. The most astonishing thing about these striped orbs is that they display repeating patterns. I have identified 21 of these patterns, which are shown in the video below, which I just loaded to Youtube.com.

[orb on escalator](#) (1)

[orb on Mars](#) (1)

[orb right angle turn](#) (52)

[orb ring](#) (95)

[orb row](#) (2)

[orb S-shape](#) (3)

[orb sandwiches](#) (1)

[orb seen in consecutive photos](#) (8)

[orb selective positioning](#) (271)

[orb shadow](#) (1)

[orb shields](#) (2)

[orb silhouette](#) (1)

[orb squirt](#) (1)

[orb stairway](#) (1)

[orb string of pearls](#) (96)

[orb stripe with two lines](#) (2)

[orb swarm](#) (137)

[orb swords](#) (1)

Below is one of the visuals from the video, showing six mysterious orbs I photographed, each having the same "inverted Y" pattern.

The video displays photos I have already assembled in [this](#) post. The advantage of watching the video is that you can see all of these astonishing pattern repetitions without having to scroll down or swipe down.

Mysterious Alignment of the Orb Stripes

Photo date: June 30, 2017. Photographer: Mark Mahin.

The photo below (not a composite) shows two mysterious orbs I photographed indoors (the line is the line between a ceiling surface and a wall surface). There are three astonishing features here:

- (1) Both of the orbs have stripes with the same width.
- (2) The two stripes both align with each other, being vertically parallel.
- (3) There is an also a letter shape in the lower orb -- the shape of the letter N.

[orb symmetry](#) (1)

[orb telepathy](#) (1)

[orb u-turn](#) (19)

[orb V-shaped turn](#) (1)

[orb veil behind orb](#) (1)

[orb veil Bezier curve](#) (1)

[orb veil outer membrane](#) (24)

[orb veil radial symmetry](#) (1)

[orb veil with concentric rings](#) (28)

[orb veil with face](#) (2)

[orb veil with internal circle](#) (45)

[orb veil with internal cross](#) (1)

[orb veil with internal diamond](#) (1)

[orb veil with rainbow edge](#) (4)

[orb veil with rainbow spot](#) (1)

[orb veil with right angle](#) (11)

[orb veil with shadow stripe](#) (5)

[orb veil with straight line](#) (39)

[orb veil with tail](#) (1)

[orb veils](#) (275)

[orb vertical bias](#) (50)

[orb vertical tail](#) (6)

[orb with blue smile](#) (1)

[orb with brighter bottom](#) (1)

[orb with central spot](#) (5)

[orb with circular hole and oval hole](#) (5)

[orb with diamond mark](#) (6)

[orb with diamond-shaped hole](#) (1)

[orb with five holes](#) (7)

[orb with four holes](#) (10)

So far I have photographed inside mysterious orbs a letter N, 7 inverted Y shapes, 4 letter J shapes, 2 T-shapes, a U-shape, 2 letter M's, a number 13, and a number 7. You can see some of these photos [here](#), [here](#) and [here](#).

Both Night Orbs Shared the Same Stripe

Photo date: September 25, 2017. Photographer: Mark Mahin.

The photo below shows two mysterious orbs I photographed in the sky. Very oddly, both orbs seem to be sharing a single stripe. This is the 388th time I have photographed in dry air an orb with a stripe. See [here](#) for other examples.

There was no fog, mist, rain or precipitation on this night.

Indoor Enigmas

The photos below various anomalous orbs I have photographed over the past few days, some speeding, and some striped. The strangest one is the orb on the bottom left. Is that a smiling face we see behind the thick stripe?

A Speeding Striped Orb

Photo date: September 21, 2017. Photographer: Mark Mahin.

The photo below shows a striped speeding orb that I photographed indoors. The camera has captured two different position states of a speeding object, and we can see a stripe in both of those.

The Orb's Letter "L"

Photo date: September 18, 2017. Photographer: Mark Mahin.

Lately I have been getting lots of letter shapes in the mysterious orbs I photograph, such as two cases of the letter "H" and two cases of the letter "T" (as shown [here](#)). In the photo below (which I took at Grand Central Terminal in New York) we see a letter "L" on the left of a blue orb. The orb appeared at the top upper edge of the photo, so I don't know what was at the top of the orb.

Edge Enigmas

Photo date: September 18, 2017. Photographer: Mark Mahin.

The photos below show two mysterious orbs I photographed at Grand Central Terminal in New York. The top orb has a strange stripe. Note how both of the orbs are aligned to the edge of one of the windows at the station. I have taken [hundreds](#) of photos of mysterious orbs aligning to structural lines and edges at this location.

The photos below show two mysterious orbs I photographed on September 18, 2017. The first one I photographed in the Queens area of New York City, and the second one I photographed in Grand Central Terminal in New York. Note the astonishing similarity. In both orbs we see a letter "H" in which the right "leg" of the H is curving to the right. In between taking these photos I took many other photos which showed no orbs and no such "H."

This is the second day on which I have photographed two mysterious orbs both having the same exact same stripe pattern, one that looked like a letter of the alphabet. The previous time this happened was on September 5, 2017, as recorded in [this](#) post. On that day I got the two orbs shown below, both having a "T" shape inside them.

Such cases (in which the exact same very distinctive orb pattern is repeated on the same day) seem to be a dramatic new wrinkle in the ever-more-astonishing orb phenomenon. It is rather hard not to interpret such cases as being a signalling effect involving some external unfathomable intelligence.

The repeated "H" pattern is one of of 23 recurring patterns I have noticed in mysterious orbs I have photographed. The grid below summarizes each of these patterns, and how many times each have been photographed. Click [here](#) to see multiple examples of each of these patterns.

Did the Spirit Orb's "H" Stand for "Haunted"?

Photo date: September 18, 2017. Photographer: Mark Mahin.

I rarely use the term "spirit orb" to describe orbs I photograph; I prefer the more neutral term "mysterious orb." But when I get something as stunning as the photo below, descriptive restraint does not seem appropriate. I have four times previously photographed the letter "T" in a mysterious orb, and four times photographed the letter "J" in such an orb (as you can see [here](#)). But this is the first time that the letter "H" has shown up inside an orb I photographed. This orb appeared while I was photographing a featureless wall indoors, and the orb had an apparent size of about a basketball. The next and previous photos showed no such anomaly -- no orb and no such letter "H."

Sky Orbs with Red Auras

The photos below show sky orbs I photographed on September 15, 2017, September 12, 2017, and August 25, 2017. The photo on the left is the 28th mysterious orb I have photographed with such a diagonal slash stripe, stretching from the top right corner of the orb to the bottom left corner of the orb. Of the 22 recurring patterns I have noticed in mysterious orbs (shown [here](#)), this pattern is the one that occurs most frequently.

Case #26 of a Diagonal Slash Orb

Photo date: September 6, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors, one with a diagonal slash stripe. I have 25 times previously photographed mysterious orbs with this type of stripe looking like a diagonal slash, as you can see [here](#). Much less common is the backslash pattern, which I have only photographed 7 times.

Spooky Stripes

Photo date: September 9, 2017. Photographer: Mark Mahin.

The photos below show two mysterious orbs I photographed indoors. Both have stripes in one corner of the orb. These are the 18th and 19th examples of a "corner chord" pattern I have repeatedly observed. See [here](#) for examples of this pattern and 21 other repeating patterns in mysterious orbs.

More Striped Orbs

Below are some mysterious striped orbs I photographed on September 2, 2017 and September 7, 2017. These are the 367th, 368th, and 369th mysterious striped orbs I have photographed in dry air.

The Second "Orb Twin" Appeared an Hour After the First

Photo date: September 5, 2017. Photographer: Mark Mahin.

Below are two mysterious orbs I photographed indoors, about an hour apart, while photographing a featureless wall. The two orbs look almost identical, both having a pair of stripes forming a "T" shape.

Imagine if someone were merely photographing natural particles. How often would a photographer get within the same hour by coincidence two particles that had distinctive markings this similar? The answer is: not once in a thousand reincarnated lifetimes. There are quadrillions of possible ways in which random markings might be arranged inside an orb, so the chance of coincidentally getting a match this similar would be less than 1 in

1,000,000,000,000,000 during any hour.

In between taking these two photos, I took several other photos which showed nothing unusual -- no orbs, and no lines. No such lines were seen in any photos after the second photo, or before the first. The photos had nothing to do with any camera irregularity.

These photos are the third and fourth times I have seen a T-shape in mysterious orbs I photographed. Two other examples are below.

This pattern is one of 22 recurring patterns I have noticed in mysterious orbs I have photographed. The grid below summarizes each of these patterns, and how many times each have been photographed. Click [here](#) to see multiple examples of each of these patterns.

Case #6 of This Orb Pattern

Photo date: August 30, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious sky orb I photographed in the night sky, on a night with no fog, mist, rain or precipitation.

This is the sixth time I have photographed a mysterious orb with a stripe looking like this one, with a stripe stretching from the top right corner of the orb to near the center of the orb. Below are 4 other examples:

This pattern is one of 22 recurring patterns I have noticed in mysterious orbs I have photographed. The grid below summarizes each of these patterns, and how many times each have been photographed. Click [here](#) to see multiple examples of each of these patterns.

A New Repeating Orb Pattern

The photos below show two mysterious orbs I photographed indoors on September 1, 2017 and August 30, 2017. We see another example of a repeating pattern, the 22nd such repeating pattern I have noticed in mysterious orbs I have photographed. I will call this the "triangle with legs" pattern. In both photos we see a dark triangle shape, and in both cases there are two stripes (or "legs") at the bottom of the triangle, one connecting to the bottom left corner of the triangle and the other connecting to the bottom right corner of the triangle.

The Striped Orbs Both Aligned

Photo date: October 30, 2017. Photographer: Mark Mahin.

The photos below show mysterious orbs I photographed at Grand Central Terminal in New York. We see three similarities in the two photos:

- (1) Both orbs appeared in front of one of the ornamental windows high up at the station.
- (2) Both orbs have straight stripes stretching from one side of the orb to the other.
- (3) Both orbs are neatly aligned to a structural line in the station, something I have seen hundreds of times in photos I have taken at this location (as shown [here](#)).

These two are the 24th and 25th examples I have seen of what I call the "corner chord" pattern, one of 24 recurring patterns I have noticed in mysterious orbs I have photographed. The post [here](#) has photographic examples of all of these patterns, which are summarized in the grid below.

A Triangle in the Orb

Photo date: October 23, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors. The stripes create a triangle shape in the lower part of the orb. See [here](#) for two similar cases.

A photo taken two days later (today) shows almost exactly the same look, although this time we don't quite see a complete triangle.

Photo date: October 13, 2017. Photographer: Mark Mahin.

In the nineteenth century in the United States, a practice called table-tipping became extremely popular. A group of people would sit at a table, and put their hands on the table. They would ask for a sign from the spirit world. Very often the table under their hands would tilt, and many witnesses said the table would rise above the floor. Some people still perform table tipping. You can see many interesting examples of table tipping on www.youtube.com, by searching for "table tipping."

The photo below shows a mysterious orb I photographed indoors. We see stripes that look just like a tilted table.

A Number 7 in a Mysterious Orb

The photo below shows a mysterious orb I photographed indoors on October 11, 2017.

Note the number 7. If you do a Google image search for "number 7" you will see several examples of fancy number 7's that look like this, with 3 lines segments rather than 2.

This is the third time I have got a number 7 in a mysterious orb I photographed. Below is a photo I took on September 6, 2017.

Bird in the Mysterious Orb?

Photo date: September 30, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors. If you look closely at the bottom right part of the orb, underneath the curving stripe, you can see what looks quite a bit like a bird figure. We can seem to see both the beak and the eye of the "bird." See [here](#) for some other photos that seemed to show animal figures inside mysterious orbs.

Night Anomalies

Photo date: September 29, 2017. Photographer: Mark Mahin.

The photos below shows various mysterious orbs I photographed last night, on a night when the moon was only slightly larger than a half moon.

There was no fog, mist, rain or precipitation on this night.

They Appeared Just After I Said "Mysterious"

Photo date: September 28, 2017. Photographer: Mark Mahin.

Yesterday I was watching a Travel Channel TV show about strange things happening in a national park. The person on the TV said the word "mysterious," and for some reason I repeated the word. A few seconds later I photographed the mysterious striped orbs below, which appeared in the same photo.

Baffling Belly

Photo date: December 11, 2017. Photographer: Mark Mahin.

The photo below (taken in Grand Central Terminal) shows a blue striped orb that appeared in front of someone's chest. Were it not for the fact that I have taken 400+ [photos](#) of mysterious striped orbs (and 1100+ [photos](#) of mysterious blue orbs), I might assume that this was just some strange attire the person was wearing.

The Letter "Y" in a Mysterious Orb

Photo date: November 16, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed in Grand Central Terminal in New York. We see the letter "Y" inside the orb.

This is the first time I have got the letter "Y" inside a mysterious orb, although I have 8 previous times got an upside-down "Y" inside a mysterious orb I photographed, as shown [here](#).

Postscript: The next day another "Y" appeared in a mysterious orb I photographed, but the orb was on the upper edge of the photo, and so the photo only shows part of the orb.

"Hook" Orb and Hurrying Orb

Photo date: November 3, 2017. Photographer: Mark Mahin.

The photos below two mysterious orbs I photographed indoors. The one on the left has a hook-like stripe. The one on the right is a striped orb that appears to be moving fast.

The 29th Orb with a Slash Stripe

Photo date: October 31, 2017. Photographer: Mark Mahin.

Of the 24 recurring patterns I have noticed in mysterious orbs I have photographed, the most common pattern is a slash stripe, typically stretching from the top right corner of the orb to the bottom left corner of the orb. Below we see the 29th time I have photographed this pattern (I took the photo indoors). See [here](#) for the other 28 cases. Much less common is the backslash pattern in which the stripe stretches in the other direction. I have only seen that pattern 6 times.

"Belt" of the Baffling Ball

Photo date: February 14, 2018. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed in the sky. Like 21 other mysterious orbs I have photographed, this orb has a belt-like horizontal stripe (along with a little X inside it).

There was no fog, mist, rain or precipitation on this night.

Orbs with horizontal stripes near their center are one of 25 recurring patterns in mysterious orbs I have photographed. The visual below shows examples of each of these patterns, and how many occurrences of the patterns I have photographed. You can see many examples of each of these patterns by looking at [this](#) post.

The Orb's Shadow Stripe

Photo date: February 8, 2018. Photographer: Mark Mahin.

A shadow stripe is a stripe consisting of a thick line and one or more thin lines parallel to the thick line. An example is below.

The photo below shows a mysterious orb I photographed indoors. We see what I have 36 times previously [photographed](#): a mysterious orb with a shadow stripe.

Weirdness Near the Flags

Photo date: January 31, 2018. Photographer: Mark Mahin.

The photos below show two mysterious orbs I photographed near US flags. The one on the left is the 468th mysterious striped orb I have photographed in dry air (see [here](#) for the other such photos).

There was no fog, mist, rain or precipitation on this night.

Nocturnal Notch

Photo date: January 31, 2018. Photographer: Mark Mahin.

The photo below shows some blue sky orbs I photographed near a building in New York City. One of the orbs has a strange notch-like feature.

There was no fog, mist, rain or precipitation on this night.

Below is another sky orb that had such a notch:

The Orb's Shadow Stripe

Photo date: January 2, 2018. Photographer: Mark Mahin.

A shadow stripe is a stripe consisting of a thick line and one or more thin lines parallel to the thick line. An example is below.

The photo below shows a mysterious orb I photographed, one of 36 mysterious orbs I have photographed with a shadow stripe, as you can see [here](#).

The Spooky Green Orb's Shadow Stripe

Photo date: December 22, 2017. Photographer: Mark Mahin.

The photo below shows a mysterious green orb I photographed in Grand Central Terminal in New York. We see a strange stripe with a thin line parallel to the stripe. This type of stripe is called a shadow stripe. I have 34 times previously photographed mysterious orbs with shadow stripes (as shown [here](#)), although most of the 400+ striped orbs I have photographed did not have such a shadow stripe.

A Speeding Shadow Stripe

Photo date: December 16, 2017. Photographer: Mark Mahin.

The photo below shows a speeding orb I photographed indoors. We can see a stripe on the orb, a particular type of stripe called a shadow stripe (in which there is a line parallel to the stripe). You can see [here](#) 33 other examples of such shadow stripes in mysterious orbs.

Striped Sky Orbs

The photos below show three striped sky orbs I photographed on April 22, 2018 and April 21, 2018. The one on the top left has two stripes.

There was no fog, mist, rain or precipitation on either of these nights.

The Band in the Baffling Ball

Photo date: April 20, 2018. Photographer: Mark Mahin.

Below we see a mysterious orb I photographed indoors,

This orb is the 24th time I have photographed a mysterious orb with a belt-like horizontal stripe. This repeating pattern is one of 26 repeating patterns I have observed in mysterious orbs I have photographed. The visual below shows examples of each of these patterns, and how many occurrences of the patterns I have photographed. You can see many examples of each of these patterns by looking at this post.

Striped Sky Orbs

Photo date: April 14, 2018. Photographer: Mark Mahin.

The photos below show two striped orbs I photographed in the sky.

There was no fog, mist, rain or precipitation on this night.

The photo on the right is the 23rd photo I have taken showing a belt-like stripe stretching horizontally from the left side of an orb to the right side. This is one of 26 repeating patterns I have noticed in mysterious orbs I have photographed. The table below summarizes these patterns and gives link to previous photos I have taken showing the patterns.

Description	Cases	Comments	URL
Inverted Y	9	Rather like the lower case lambda character, part of the Greek alphabet	https://orbpro.blogspot.com/2016/11/the-seventh-photo-ive-taken-of.html https://orbpro.blogspot.com/2017/08/the-8th-occurrence-of-inverted-y-orb.html https://orbpro.blogspot.com/2018/01/the-ninth-inverted-y-in-mysterious-orb.html
Umbilical cord (AKA "cul-de-sac")	10	Resembles an umbilical cord with a curved loop.	https://orbpro.blogspot.com/2016/11/the-10th-appearance-of-this-orb-motif.html
Curved stripe at top or bottom	13	May be on top or bottom of orb	https://orbpro.blogspot.com/2017/01/high-enigma-of-striped-orb.html

Another Orb Curvy Stripe

Photo date: March 28, 2018. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors. We see a strange curved stripe at the bottom of the orb.

This is the 12th time I have photographed a mysterious orb with a curved stripe at the top or bottom. This is one 26 recurring patterns I have seen in mysterious orbs I photograph. The grid below summarizes each of these patterns, and shows how often the patterns have occurred. You can see examples of all of these patterns by looking at [this](#) post.

An Astonishing Repetition

Photo date: May 19, 2018. Photographer: Mark Mahin.

The photos below were taken about a minute apart. In the first we see an orb with a very distinctive zig-zag line, and in the second we see an orb with the same zig-zag line. In both photos we also see a nearby orb with a horizontal stripe. There were three photos taken between these two photos that showed no such thing, and one of the photos showed an empty, featureless sky. The strange zig-zag line did not appear in any more of 25 additional photos I took with the same camera that night.

Unlike 99% of the photos on this site, which are taken under dry weather conditions with no fog, mist, or rain, these photos were taken when there was some fog. The fog can explain the circular shapes, but not the bizarre repetition of the zig-zag line.

The Marks in the Mysteries

Below are various mysterious orbs I photographed in early May, all of which have some type of strange stripe or mark.

The Loop in the Luminosity

Photo date: May 11, 2018. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed in the sky. We see a strange curved stripe that forms a kind of loop.

There was no fog, mist, rain or precipitation on this night.

Strange Sky Slash

Photo date: May 5, 2018. Photographer: Mark Mahin.

The photo below shows a mysterious striped orb I photographed in the sky.

There was no fog, mist, rain or precipitation on this night.

This is the 34th time I have photographed a mysterious orb with a slash-like stripe stretching from the top right part of the orb to the lower bottom part. This repeating pattern is one of 26 repeating patterns I have observed in mysterious orbs I have photographed. You can see many examples of each of these patterns by looking at this post.

The Orb's Shadow Stripe

Photo date: April 23, 2018. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors. We see two stripes at the bottom, one of them what is called a shadow stripe. A shadow stripe is a stripe consisting of a thick line and one or more thin lines parallel to the thick line. See [here](#) for dozens of examples of orbs with such a stripe. This is the 504th mysterious striped orb I have photographed in dry air.

A Striped Sky Orb

Photo date: June 28, 2018. Photographer: Mark Mahin.

The photo below shows a mysterious striped orb I photographed near the Waldorf Astoria hotel in New York. It is one of 500+ mysterious striped orbs I have photographed (see [here](#) for other examples).

There was no fog, mist, rain or precipitation on this night.

A Strange Sky Orb

Photo date: May 2, 2018. Photographer: Mark Mahin.

The photo below shows a weird orb I photographed in the sky. We see in the orb several stripes that are intersecting with each other.

The 36th Repetition of This Orb Pattern

Photo date: June 19, 2018. Photographer: Mark Mahin.

The photo below shows a mysterious striped orb I photographed in the sky.

There was no fog, mist, rain or precipitation on this night.

This is the 36th time I have photographed a mysterious orb with a stripe just like this one, stretching from the top right to the bottom left of the orb. This repeating pattern is one of 27 repeating patterns I have observed in mysterious orbs I have photographed. The visual below shows examples of each of these patterns, and how many occurrences of the patterns I have photographed. You can see many examples of each of these patterns by looking at this post.

They Saw Orbs

The document [here](#) is a long collection of reports of people who reported seeing something paranormal, often what the witnesses described as fairies. Mixed within the reports are occasional reports of people seeing mysterious orbs with their own eyes, or photographing orbs with an image inside them. Below are some of the interesting reports.

Page 65: 'I have often seen lights orbs and mists while watching TV or listening to music.'

Page 69: "The second kind were like orbs of light darting around, you could see light bursting from their bodies. "

Page 113: "Once back home, I zoomed in on my orb photos taken during that last evening, and found upon enlargement, in one of them, there was an unmistakable being with wings."

Page 114: "It was dark outside and I pressed halfway down on my camera and through the viewfinder, there were about three large blue orbs right by the window pane, as if they were looking in on us from the outside!"

Page 115: "I have managed to see little blue lights or orbs around my flat from time to time."

Page 115: "The third fairy, which also appeared in an orb, was blue and had a cherubic face. "

Page 115: "In another photo of an orb, a blue one, when enlarged, I could make out a beatific little childlike face, which had a garland of flowers round its neck."

Page 115: "Though it appeared in an orb, I had the impression (perhaps this was communicated to me telepathically) that this

being's real size was much taller than I am."

Page 116: "The blue orbs appeared when I was playing with my cat Fig."

Page 138: "When involved in healing work have observed small winged creatures inside different colored orbs of light around subject."

Page 201: "I have seen a lot of things in my life, like ghosts, orbs, UFOs but have never seen a mythical creature like the beloved fairy."

Page 223: "What they were seeing were lights, like glowing orbs the size of a fist."

Page 270: "Other things happened in that cabin on the water that were what you might call supernatural, but nothing like the glowing orb ever appeared to any human person ever again."

Page 294: "'I have taken photos of spirit orbs and Earth bound souls for over a year now. I am gifted to be able to cross souls to the light therefore my love and light are very strong and I attract a lot of spirits and angels to me as you can imagine."

Page 304: "Then a florescent purple orb about the size of a small basket ball came into the room and landed next to me on the bed. We exchanged a mental greeting to each other and I thanked it for showing itself to me. Then it streaked out of the room disappearing through the ceiling."

Page 314: "Going back to camp my friend saw a floating orb light, it looked like a lantern floating through the air. We camped in these woods several nights and saw the orb lights twice more. "

Page 314: "I turned to see what was making the sound and an ORB about two and a half inches in circumference flew over my shoulder and in front of me. I was in awe. It was golden green with a tinge of blue and it left a trail of glittering gold with a tinge of green 'dust' behind it. Even after the orb disappeared the glittering dust remained until it slowly faded. It was the most beautiful thing, that I had ever seen. "

Page 318: "Faerie orbs fly around the house and gardens."

Below is a mysterious orb I photographed yesterday, one of 500+ mysterious striped orbs I have photographed.

Mysterious Marks

The grid below shows four mysterious orbs I photographed indoors in the past few days, all of which have stripes.

I have photographed over 500 mysterious striped orbs, as you can see [here](#). Although many got mysterious orbs in their photos long before 2015, to the best of my knowledge, no one ever reported getting a striped orb in a photograph until the first time that I reported that in July 2015 (in [this](#) post). I photographed many, many hundreds of mysterious orbs between September 2014 and June 2015, but did not get any striped orbs during that period (at least none that I noticed). Since July 2015, I have got these striped orbs in astounding numbers. The stripes only appear inside the orbs, never outside of them.

The 11th Time I've Got This Orb Pattern

Photo date: August 3, 2018. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors.

This is the 11th time I have photographed a mysterious orb with an inverted Y inside it. The grid below shows all eleven of these orbs (see [here](#) for the original posts), I first started getting this pattern in September of 2016. Last year I also got one of these inverted Y orbs on the third of August.

Orbs Seen During Alien Abductions?

While watching the *Ancient Aliens* TV show, I heard journalist Linda Moulton Howe say that she had interviewed a vast number of people who claimed to have experienced something like an "alien abduction." She said there were common characteristics, and one of them was seeing orbs of light.

I did a Google search on the topic, and found [this](#) interesting page detailing a careful study of people who claimed experiences like "alien abductions." We read the following, which uses ETs to mean extraterrestrials:

"88% of the abduction experiencers reported that they had witnessed paranormal activity in their homes, including light orbs that dart or float through the air. Sometimes the orbs pop like a bubble into 1-3 ETs. Many reported poltergeist activity such as household items flying through the air, pictures flying off walls, lights turning off and on, windows opening and closing, doors opening and closing and toilets flushing on their own."

I've photographed thousands of orbs, and I have also experienced many inexplicable events around the home, such as reported [here](#). Could an alien abduction be in my future? All I can say is: it hasn't happened yet.

Below is a striped sky orb that I photographed this week, on a dry night with no fog, mist, rain or precipitation:

The Orb's Inverted U

Photo date: July 7, 2018. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors. We see a strange upside-down U stripe at the bottom of the orb. It rather looks like the shape of a woman's hairstyle.

number of mysterious striped orbs that I have photographed is now greater than 600. You can see them all by following [this](#) link, and continuing to press the "Older Posts" link at the right bottom.

There was no fog, mist, rain or precipitation on this night.

These are the 29th and 30th times I have photographed a mysterious orb with a stripe in one of the corners of the orb. This repeating pattern is one of 27 repeating patterns I have observed in mysterious orbs I have photographed. The visual below shows examples of each of these patterns, and how many occurrences of the patterns I have photographed. You can see many examples of each of these patterns by looking at [this](#) post.

Another X in a Sky Orb

Photo date: October 10, 2018. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed in the sky on a night with no precipitation.

This is the sixth time I have photographed a mysterious orb with the letter X in it. Below are five other mysterious orbs I photographed with such a letter. Note that in all six cases, the X is a tall narrow X.

This repeating pattern is one of 27 repeating patterns I have observed in mysterious orbs I have photographed. The visual below shows examples of each of these patterns, and how many occurrences of the patterns I have photographed. You can see many examples of each of these patterns by looking at [this](#) post.

A Striped Orb

Photo date: May 23, 2019. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors.

This is the 9th time I have photographed a mysterious orb with a "backslash" stripe just like this one, stretching from the top left of the orb to the bottom right of the orb. This repeating pattern is one of 27 repeating patterns I have observed in mysterious orbs I have photographed. The visual below shows examples of each of these patterns, and how many occurrences of the patterns I have photographed. You can see many examples of each of these patterns by looking at [this](#) post.

The 41st Slash Stripe in a Mysterious Orb

Photo date: March 11, 2019. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed in the sky.

There was no fog, mist, rain or precipitation on this night.

This is the 41st time I have photographed a mysterious orb with a slash-like stripe stretching from the top right of the orb to the bottom left of the orb. This repeating pattern is one of 27 repeating patterns I have observed in mysterious orbs I have photographed. The visual below shows examples of each of these patterns, and how many occurrences of the patterns I have photographed. You can see many examples of each of these patterns by looking at [this](#) post.

The Bands in the Baffling Balls

The photos below show some mysterious striped orbs I photographed in recent days. The second and third ones look so similar you might think they are the same one, but they are different (the third having some green not in the second one).

The consistency of the thickness of orb stripes is astonishing. I have photographed [more than 600](#) mysterious striped orbs, and I would estimate that more than 50% of them have a thickness about the same as we see in these orbs: a thickness about one sixth of the width of the orb.

Another interesting thing about mysterious striped orbs is how they seem to appear in long-lasting "streaks." When I first started getting mysterious orbs in 2014, I took very many orb photos without getting a single striped orb. Then striped orbs started to appear, and appeared in my photos in great abundance for many months. But by around December 2018 I started to get a long "slump" in which mysterious striped orbs would appear only about once or twice a month. But by May 2019 the mysterious striped orbs had

- [air orb with oval mark](#) (1)

Backslash Ball

Photo date: May 31, 2019. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors.

This is the 10th time I have photographed a mysterious orb with a "backslash" stripe just like this one, stretching from the top left of the orb to the bottom right of the orb. This repeating pattern is one of 27 repeating patterns I have observed in mysterious orbs I have photographed. The visual below shows examples of each of these patterns, and how many occurrences of the patterns I have photographed. You can see many examples of each of these patterns by looking at [this](#) post.

Repetition of the Mysterious Pattern

Below we see two mysterious orbs I photographed this month. Both have the letter "Y" inside them. This is the fourth such "Y" I have got in the past two

We see below a mysterious orb I photographed indoors.

Four days earlier I [photographed](#) a mysterious orb with the same "curvy Y" pattern consisting of a curved stripe and a straight stripe. Below we see that orb:

This repeating pattern is the 28th repeating pattern I have observed in mysterious orbs I photographed. The visual show shows examples of each of the patterns, and how often I have photographed particular patterns. You can see examples of all of these patterns by looking at [this](#) post.

Midtown Marvel

Photo date: June 26, 2019. Photographer: Mark Mahin.

We see below a mysterious orb I photographed at Grand Central Terminal in New York.

Strangely, earlier on this day I had stated on this blog, "It is rare to see an orb with both a straight stripe and a curved stripe." On the same day, I got another orb with such a combination.

"Split" and Spooky

We see below two mysterious orbs that I photographed in June, 2019.

This is the 15th time I have photographed a mysterious orb with a vertical stripe like these ones, stretching from the top of the orb to the bottom of the orb. This repeating pattern is one of 27 repeating patterns I have observed in mysterious orbs I have photographed. The visual below shows examples of each of these patterns, and how many occurrences of the patterns I have photographed. You can see many examples of each of these patterns by looking at [this](#) post.

Another Orb Reappearance

Below we see two photos I took, with the second taken an hour and twenty-one minutes after the first. We see a very distinctive-looking "ballet dancer" motif repeated at the top of both of the photos. It looks like a stick figure of a leaping ballet dancer. I took many photos in between these photos showing no such anomaly.

See [here](#) for two other equally dramatic cases of orb reappearances.

Fasten your seat belts, folks. The phenomenon of mysterious striped orbs seems to be intensifying. There may be some truly jolting results to come. But I can't predict how long this intensification will last. I have found that there will be "streaks" lasting months in which mysterious striped orbs appear very often and very dramatically, but then there will be "slumps" lasting months in which I rarely get striped orbs.

Bright Orb with a Shadow Stripe

Photo date: September 3, 2019. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors. Like more than 50 other mysterious orbs I have [photographed](#), the orb has a shadow stripe in which we see a thin line parallel to a much thicker band.

A Mysterious Phenomenon

The photos below show some mysterious striped orbs I photographed in recent weeks. I have now been getting mysterious striped orbs abundantly for a full four years, and have taken more than 600 photos of them. For the first nine months in which I photographed mysterious orbs, none of them or virtually none of them were striped.

7 Repetitions of a "Foot" Pattern

Below we see seven mysterious striped orbs that I photographed in August 2019 and September 2019. They all have stripes that create the appearance of a foot-like shape. See [here](#) for many other examples of repeating patterns in mysterious orbs.

Three Orb Shadow Stripes

Below we see some mysterious orbs that I photographed indoors. In three of the orbs we see "shadow stripes" consisting of a thin stripe parallel to a thicker stripe.

Baffling Backslashes

We see below some mysterious orbs I photographed in recent days, all of which have stripes looking like a backslash symbol.

This now makes 19 times that I have photographed mysterious orbs with such a backslash pattern. This is one of 32 repeating patterns of mysterious orbs I have photographed. The visual below shows an example of each of the patterns, and how many times I have photographed each. Multiple examples of all of these patterns can be seen [here](#).

Orb Deja Vu

We see below two mysterious orbs that I photographed. Both have the same stripe shape. In both we see clear examples of "shadow stripes," in which a thin line matches the shape of a thicker line.

Orb with a Curved Stripe

Photo date: September 28, 2019. Photographer: Mark Mahin.

The photo below shows a mysterious orb I photographed indoors. We see a dramatic "shadow stripe" that reminds me of a curved road (with a sidewalk) at a cul-de-sac.

Paranormal Reappearance

Photo date: September 21, 2019. Photographer: Mark Mahin.

Below we see a mysterious orb that I photographed indoors. The strange shape on the right is a shadow from a sports trophy earned by one of my daughters.

This orb appeared about 10 hours after I published photos of seven orbs that all had a similar-looking stripe, forming a kind of foot shape. You can see the post [here](#).

This repeating pattern is only the latest of 33 repeating patterns I have observed in mysterious orbs I have photographed in clean dry air. The grid below shows examples of each pattern, along with how many times each was observed. You can see many examples of all of the patterns on [this](#) page.

Orb with a Curved "Shadow Stripe"

Photo date; November 4, 2019. Photographer: Mark Mahin.

We see a mysterious orb I photographed indoors, one of 700+ mysterious striped orbs I [have photographed](#).

Number in the Orb

Photo date: October 26, 2019. Photographer: Mark Mahin.

The photo below shows a mysterious orb that I photographed indoors.

This is the fourth time I have photographed a "7" number inside a mysterious orb. This repeating pattern is only the latest of 34 repeating patterns I have observed in mysterious orbs I have photographed in clean dry air. You can see many examples of all of the patterns on [this](#) page.

Tilt Your Head Left to See the "Face"

Photo date: January 27, 2020. Photographer: Mark Mahin.

Upon first taking the photo below, I failed to see anything resembling a face. But if you tilt you head way to the left, you can notice what looks rather like the head of a man wearing a dark T-shirt.

Thrice Observed

Below we see three mysterious orbs I photographed indoors on the dates displayed. They all have the exact same pattern of two stripes, one wiggly and one straight.

This is the 35th repeating pattern I have noticed in mysterious orbs I photographed in dry clean air. The visual below shows each of these patterns, and how often I have photographed them. Multiple examples of each of the patterns can be seen at [this](#) post. An entirely different set of repeating patterns (easily numbering greater than 70) is the set of massively repeating patterns I have seen while photographing falling water drops. Examples of those patterns can be seen in [this](#) post.

Same Stripe, Same Day, Same Spot

Photo date: December 24, 2019. Photographer: Mark Mahin.

We see below two mysterious orbs that I photographed on the same day. They both appeared at almost exactly the same spot, near the blue rectangle (part of a book) that you can see on the right of both images.

Spooky Station

Photo date: December 18, 2019. Photographer: Mark Mahin.

The photo below shows part of the ceiling of Grand Central Terminal, looking different from normal in two ways. On the left we see some special Christmas lighting (the ornamental window frames were green or red). On the right we see a mysterious striped orb.

Below is another photo from the same day, showing a blue orb near a person.

The Sixth Occurrence of the "E Minus" Orb Pattern

At the bottom right of the grid below, we see the latest occurrence of what I call the "E minus" orb pattern. I took all of these photos on the days shown in the grid. I did not get such a pattern on any of the days not listed.

This is the 35th repeating pattern I have noticed in mysterious orbs I photographed in dry clean air. The visual below shows each of these patterns, and how often I have photographed them. Multiple examples of each of the patterns can be seen at [this](#) post. An entirely different set of repeating patterns (numbering greater than 100) is the set of massively

The Stripe Was Like a Winding River

Photo date: February 14, 2020. Photographer: Mark Mahin.

The photo below shows a mysterious striped orb I photographed in Grand Central Terminal in New York.

A very different-looking stripe can be seen in the photo below from the same day. We see in the lower middle of a yellow orb three lines that form a kind of reverse "C." Such a shape was not part of the background, which was horizontal lines.

The Fifth Occurrence of the "E Minus" Orb Pattern

At the bottom of the grid below, we see the latest occurrence of what I call the "E minus" orb pattern. I took all of these photos on the days shown in the grid. I did not get such a pattern on any of the days not listed.

[orb at bar](#) (3)

[orb at top of arch](#) (10)

[orb aura](#) (78)

[orb behind distant Christmas wreath](#) (5)

[orb disks](#) (3)

[orb donuts](#) (4)

[orb double alignment](#) (7)

[orb double right angle turn](#) (4)

[orb during eclipse](#) (4)

[orb eclipse](#) (5)

[orb eye detail](#) (39)

[orb face](#) (633)

[orb face within orb face](#) (1)

[orb faces on windows](#) (10)

[orb halfway in shadow](#) (1)

[orb hammers](#) (1)

[orb head and shoulders motif](#) (5)

This is the 35th repeating pattern I have noticed in mysterious orbs I photographed in dry clean air. The visual below shows each of these patterns, and how often I have photographed them. Multiple examples of each of the patterns can be seen at [this](#) post. An entirely different set of repeating patterns (numbering greater than 100) is the set of massively repeating patterns I have seen while photographing falling water drops. Examples of those patterns can be seen in [this](#) post and [this](#) post.

In the photo below, one I took on February 4, 2020, we see a half-occurrence

- [orb healing](#) (1)
- [orb hexagon](#) (2)
- [orb hole](#) (455)
- [orb hole polygon](#) (2)
- [orb hole positional bias](#) (68)
- [orb hook-like stripe](#) (4)
- [orb in American Museum of Natural History](#) (7)
- [orb in crystal ball](#) (1)
- [orb in mall](#) (1)
- [orb in Rockefeller Center](#) (9)
- [orb in tree](#) (2)
- [orb inside orb](#) (8)
- [orb line](#) (28)
- [orb lines](#) (2)
- [orb lollipops](#) (1)
- [orb mouth detail](#) (25)
- [orb moving against the wind](#) (9)
- [orb mushroom](#) (10)
- [orb near Chrysler Building](#) (30)
- [orb near Columbus Circle](#) (7)
- [orb near cross](#) (2)
- [orb near Empire State Building](#) (23)
- [orb near information window](#) (19)
- [orb near moon](#) (1)
- [orb near physical orb](#) (14)
- [orb near temple](#) (2)
- [orb near tinsel](#) (5)
- [orb near Waldorf Astoria hotel](#) (12)
- [orb nose detail](#) (5)
- [orb not blurred in blurred photo](#) (12)
- [orb notch](#) (5)
- [orb notches](#) (48)
- [orb on banister](#) (10)
- [orb on edge of photo](#) (1)

of the "E Minus" orb pattern. I won't count this as the sixth occurrence of the pattern, because you cannot see the "minus sign" part of the pattern.

Not Part of the TV Episode

Photo date: February 3, 2020. Photographer: Mark Mahin.

Below we see a photo of my TV set, which has a 2-inch plastic border. The striped orb in the picture was not part of the TV episode, an episode of *Star Trek: Deep Space Nine*. We can see that the orb is partially in front of the TV's plastic border.

Strange Lines in the Orb

Photo date: April 19, 2020. Photographer: Mark Mahin.

We see below a mysterious orb that has some strange lines inside it. The shape rather reminds me of a child's "hobby horse."

Below we can see how closely this pattern matches a previous photo:

The Third Occurrence of the "Ribbon and Ring" Pattern

Photo date: June 17, 2020. Photographer: Mark Mahin.

At bottom we see the third instance of a pattern I call the "ribbon and ring" pattern. This is one of 39 repeating patterns I have seen in mysterious orbs I have photographed in normal air. You can see the patterns [here](#). While photographing falling water drops, I have got innumerable other repeating patterns you can see [here](#) and [here](#).

- [air orb with oval mark](#) (1)
- [air orb with rainbow edge](#) (1)
- [air orb with small ring](#) (14)
- [air orb with triangle](#) (7)
- [air orb with two shades of blue](#) (1)
- [animal apparition](#) (9)
- [animal face in orb](#) (16)
- [animal face in water drop orb](#) (2)

The Math Showing That Orbs Are Not Dust, Pollen, or Water Vapor

Orbs are strange-looking circular objects that show up in photos, without any obvious explanation. There are skeptics out there who claim that most of the orbs in photos are just dust. These skeptics all have one thing in common: they forgot to do their math before making such a claim. Let's do the math, which will show that the "orbs are dust" claim is nonsense. Similar math will debunk the idea that pollen or water vapor can explain orbs.

The Math Relating to Dust and Orbs

To do this math, we must consider a simple ratio that I will call the *blockage fraction*. The blockage fraction is the ratio between the width of a natural particle floating in the air, and the width of the area right in front of a camera lens. Computing such a ratio will tell us whether it is reasonable to think that suspended dust particles in normal air might be big enough to appear as visible orbs in photographs.

For a point-and-click camera, a simple measurement is enough to show the width of the area right in front of the camera lens. This width is roughly 15 millimeters.

But what about the width of natural particles suspended in the air? Although a skeptic may try to "cloud the waters" here by suggesting this is a matter of great uncertainty, it is no such thing. The size of particles floating in the air is settled science widely used by air quality experts, pollution experts, and meteorologists. Scientists have electronic instruments that allow them to measure such particle widths very exactly. Do a Google search for "particle size chart" and you will get quite a few charts that all give pretty much the same numbers (such as those shown in [this wikipedia.org](#) article on particulates).

There is general agreement about the following particle size estimates, although estimates may vary by as much as 50%. A micron is a thousandth of a millimeter, or a millionth of a meter. You can find many charts like the one below by doing a Google image search for "particle size chart."

Condition of air	Particle size

Outdoor air, dry	1 micron
Indoors, normal	10 microns
Indoor dust spikes (vacuuming, etc.)	50 microns
Outdoor heavy smog	30 microns
Heavy fog, mist	500 microns
Heavy visible dust in air, reducing visibility	500 microns
Rain	1000 microns or more

Now let's plug these numbers into a spreadsheet that computes the blockage fractions. The spreadsheet is below. The numbers in the fourth column are simply the numbers in the second column divided by the numbers in the third column.

Air Condition	Particle size (microns)	Length of area right in front of lens (microns)	Blockage fraction (maximum size of natural orb as fraction of original photo width)	Would you notice a photo orb caused by a natural particle suspended in air?
Outdoor air, dry	1	15000	0.00007 or 1/15000	No
Indoors, normal	10	15000	0.00067 or 1/1500	No
Indoor, dust spikes (vacuuming, etc.)	50	15000	0.0033 or 1/300	No
Outdoor heavy smog	30	15000	0.002 or 1/500	No
Thick fog or mist	500	15000	0.03 or 1/30	Maybe
Heavy visible dust in air, reducing visibility	500	15000	0.03 or 1/30	Maybe
Rain	1000 or more	15000	0.07 or more	Maybe

This table tells us how absurd is the notion that dust particles in ordinary outdoor air are sufficient to produce orbs in photographs. Since such particles cannot block more than about 1/15000 (one fifteen thousandth) of the original photo width, they are many times too small to produce noticeable orbs in photos. This table also tells us that dust particles in ordinary indoor air are way too small to produce orbs in photos. Such particles cannot block more than about 1/1500 (one fifteen hundredth) of the original photo width.

You also need not suspect that some orb in an indoor photo was caused by some dust spike causing the average particle size to rise as high as 500 microns – not unless the visibility was sharply reduced, and the air was visibly thick with dust. Whenever the air becomes filled with particle sizes larger than 100 microns, they decrease visibility quite noticeably, because the human eye can detect particles as large as 50 microns. So unless you were blasting out a wall during construction or toppling a large book case or making a big mess in the kitchen with lots of baking powder flying around – or doing something else that caused a noticeable decrease in visibility – there is no chance that the natural particles in the air were sufficient to produce noticeable orbs in a photo. Particles as large as 100 microns or larger always settle to the ground fairly quickly, at a rate of about a meter per six minutes. So indoor dust spikes quickly die out.

Could it be that we might get a different “blockage fraction” when we consider not a point-and-shoot camera but an expensive DSLR camera with a much wider lens? Yes, but in this case the “blockage fraction” would not be larger, but 50% smaller. So things aren't helped if a skeptic assumes a big camera lens was used – in fact, it then becomes twice as hard to believe that natural particles may have caused an orb.

In this discussion I have been extremely generous to the skeptic, by assuming pretty much the smallest possible “length of area right in front of lens” (the second column in the spreadsheet above). In fact, any particle photographed right next to the camera lens will appear as very blurred. When considering an orb that appears with a sharp, non-blurred edge, you must consider a “length of area right in front of lens” to be 2 or 3 times larger than 15 millimeters. That results in a “blockage fraction” that is even smaller (by a factor of two or three times) than the fractions shown above, which just makes it two or three times more unlikely than orbs in ordinary air could be produced by natural particles.

These considerations clearly show that dust cannot be a major source of orbs in photos. Under 99% of the conditions under which orb photos are taken, the particles of dust in the air are way, way too small to produce orbs that you might notice in a photo.

The Math Relating to Pollen and Orbs

Now let's consider the math relating to pollen and orbs. We must again consider particle sizes. Almost all types of pollen have particle sizes less than 50 microns, although a few types of pollen have particle sizes as large as 100 microns. So you might think that if we use a chart like the one above, we

would consider that a pollen particle might block as much as 1/150th of a photo width.

But there is another important thing to consider in regard to pollen: the number of particles per cubic meter. A pollen forecast is normally given as low, medium, high, or very high (and it is very rare to get the “very high” forecast). Here are the number of pollen particles per cubic meter that correspond to these forecasts, according to a page from the University of Worcester (similar information is given [here](#)).

Pollen Forecast	Pollen Particles Per Cubic Meter
Low	Less than 30
Medium	30 to 49
High	50 to 149
Very high	150 or more

Now, from these figures we can calculate a likelihood of a pollen particle existing in the area right in front of the camera. Since pollen particles are so small (less than 100 microns), we can conclude that if a pollen particle was not right in front of the camera, it could not possibly appear as an orb in a photo. The area right in front of a point-and-click camera has a width of about 15 millimeters (15,000 microns), which is equal to 1.5 centimeters. What fraction of a cubic meter is a cubic area with a width of 1.5 centimeters? It is only 1 divided by 666,666. Even if we assume that a pollen particle might be visible in a photo if it appeared in a slightly larger volume next to the camera lens (an area of 4 cubic centimeters), that 4 cubic centimeters is only 1/250,000 (one two hundred fifty thousandth) of a cubic meter.

Using that figure, we can expand the table above to show what the probability would be of a pollen particle being right next to your camera lens when you take a flash photo. The fourth column is obtained simply by dividing the second column by the third column.

Pollen forecast	Pollen particles per cubic meter	Number of 4 cubic centimeter volumes per cubic meter	Chance of a pollen particle existing in a 4 cubic centimeter volume right next to camera lens
Low	Less than 30	250000	Less than 1 in 8333
Medium	30 to 49	250000	Between 1 in 8333 and 1 in 5102
High	50 to 149	250000	Between 1 in 5000 and 1 in

			1678
Very high	150 or more	250000	Greater than 1 in 1678

Given that the “very high” pollen forecast is very rare, what these probabilities means is that your chance of taking an outdoor photo and having a pollen particle floating right next to your camera lens when you take a flash photo is negligible. Perhaps a few times in a lifetime, a photographer might take a flash photo in which a speck-like orb showed up because a pollen particle was floating right next to the camera lens. But given the probabilities above, we should not expect that to happen more than once in a year. So pollen can be ruled out as a source of orbs in photos, except for the most extremely rare “blue moon” type of event, which would only result in something like a speck on a photo. We can therefore be quite confident that 99% of the orbs shown in photos were not caused by pollen particles. I also have many photos (shown [here](#)) that show lots of orbs on days when the local pollen count listed on pollen.com was very low.

Mold Spores

Mold spores are more common than pollen particles, but mold spores are much smaller, being smaller than about 50 microns in width. This means the math for a mold spore is similar to the “vacuuming” case discussed above. So mold spores can’t block more than about 1/300 of the width of the photo, which is too small to produce anything more than a speck in a photo.

Water vapor particles

Another possibility sometimes mentioned as a natural source of orbs is water vapor particles in the air. But water vapor particles in ordinary air (called aerosols) are not any larger than dust. So the same blockage fraction consideration (discussed above) that rules out dust in ordinary air as a source of orbs also rules out water vapor or aerosols in ordinary air as a source of orbs. Since water vapor in ordinary air only has a particle size on the order of 1 micron or less, a typical particle of water vapor will block no more than 1/15000 (one fifteen thousandth) of the area in front of a point-and-click camera (15 millimeters or 15,000 microns), which is way too little to produce an orb in a photo.

The only exception is the case of heavy fog or heavy mist, which is quite rare and very easy to notice. Heavy fog or mist can account naturally for no more than a tiny fraction of orbs photos (because of the rareness of heavy fog or mist in almost all locales). Heavy fog or mist cannot account for any of the paranormal-looking orb photos on this site, as I am careful not to photograph under conditions of fog or mist (which is very rare where I live during the hours that I photograph).

In the very rare cases in which heavy fog or mist occurs in the air, in sufficient amounts to produce orbs, it blankets most of the photo with little circles, making it very easy to notice, and making it unsuitable for an explanation of any photos showing one or a few orbs in a photo.

Conclusion

The bottom line is: virtually all orbs produced in photos taken in normal indoor conditions and dry outdoor conditions cannot be the result of any natural particles in the air, for the particles floating about in the air under such conditions are way too small to produce orbs in photos (or, in the case of pollen, both too small to produce orbs bigger than specks, and also exceedingly unlikely to appear right in front of the camera lens). So why is it, then, that the “orbs are dust” idea has been so widely spread about? The reason is that skeptics have an extremely effective propaganda machine which allows them to spread their ideas far and wide – even when they are in glaring conflict with well-established facts such as the average sizes of particles in the air.

These conclusions are confirmed by the simple observational fact that at least 99% of the total number of flash photos taken by the world's photographers do not show orbs. If dust or pollen or water vapor in ordinary air was sufficient to produce orbs, then a large fraction of the world's flash photographs would show orbs -- but much less than 1% of such photos show orbs. The skeptic conveniently ignores this fact, which by itself is sufficient to rule out the hypothesis that most orbs in photos are caused by dust, water vapor, or pollen.

Are there any known natural or artificial things that can cause orbs in photos? Yes, those things are heavy fog or heavy mist, rain, and lens flare. I am sure that the great majority of photos on this web site cannot be explained by assuming that any of these things was the cause. I know that rain, fog, or mist cannot explain orbs in any significant fraction of my outdoor photos because I am careful to avoid taking photos when any of these things are present (and when presenting an outdoor photo I always state that none of these things were present). I also know that lens flare (which almost always has a very distinctive “easy-to-spot” look) is not a cause for any large fraction of my orb photos, because lens flare is only produced when you point the camera at the sun or a very bright artificial light close to the camera (something I am very careful to avoid). All of my many Grand Central Station are photos taken from balcony spots in which there is never a bright light near the camera.

In short, the orb photos on this site are mysteries that cannot be currently explained. Maybe someday someone might think of some ingenuous natural explanation, but none of the things discussed here are suitable candidates.

Below is an example of a photo completely inexplicable through any hypothesis of natural particles in front of the camera. The photo was taken on a dry cloudless night (November 10, 2017) with no fog, mist, rain, or precipitation, a night on which the moon was only a half moon. We see a very bright moving orb that is 11 percent of the original photo height. To produce such an orb, a dust particle would have to have a width of about 1500 microns -- some 1500 times greater than the actual width of particles on a day like this. In fact, dust particles suspended in the air never get larger than a width of about 1000 microns, even when the dust is so heavy that it blocks visibility. See [here](#) for 86 similar photos showing large orbs.

[Colorful Floating
"Sky Jewels"](#)

See my [posts](#) labeled "air orb too large to be dust" for 86 similar photos, including some showing orbs larger than 60% of the photo height.

The overall reasons for rejecting the idea that orbs are particles of dust near the camera include the facts that many orbs are too big to be dust (for the reasons discussed in this post), too bright to be dust (as shown in my 500+ [posts](#) labeled "bright air orb"), too fast-moving to be dust (as shown in my 500+ [posts](#) labeled "speeding air orb"), too colorful to be dust (as shown in my 1500+ posts labeled either "[blue air orb](#)," "[yellow air orb](#)," "[purple air orb](#)," "[green air orb](#)," "[pink air orb](#)," or "[orange air orb](#)"), or too far from the camera to be dust (as shown in my 66 [posts](#) labeled "air orb too distant to be dust" which often show orbs partially behind distant obstructions).

Further very strong evidence against the idea that orbs are dust is the fact that when I start getting lots of orbs in my photos, I often pull out a piece of cardboard, and photograph it at arm's length; but not once have any of the resulting photos shown a single orb in front of the piece of cardboard. You can see these photos by looking at my 41 [posts](#) labeled "cardboard test."

Further very strong evidence against the idea that orbs are dust is the fact that I very often have seen a very strong "vertical bias" in my orb photos -- a tendency for orbs to appear many times more frequently in the upper part of my photos. See my [posts](#) labeled "orb vertical bias" for examples. Such photos are completely inconsistent with the idea that the orbs are being caused by natural particles near the camera, for such particles would appear randomly across the photo area, not many times more often in the upper part of the photo. For example, in [this](#) series of photos I found there were about 845 orbs that were not in front of a building at the bottom of the photos, and only about 7 orbs that were in front of that building. This extremely strong "vertical bias" is completely inconsistent with any explanation that the orbs were being caused by natural particles (such as dust) very near the camera.

Further very strong evidence against the idea that orbs are dust is the fact that when you attempt to photograph dust in front of the camera (using artificial techniques such as squeezing a dusty cloth right in front of the camera), such as shown [here](#), the resulting dust orbs are dull, colorless, featureless, small, and with blurry edges. Contrast these with the orbs shown

The diagram below may help to illustrate how absurd it is to try to explain photos like the one above as photos of dust. The diagram shows one tenth of the area right in front of a point-and-click camera lens with a diameter of about 15 millimeters (15,000 microns). The arrow points to a tiny particle that is the size of the largest dust particles floating about in ordinary indoor air (which are only about 10 microns). The particle is so small you won't be able to see it clearly unless you bring up the image in an editor and zoom in. Could a particle this size cause an orb as big as the one shown above? No, it's many times too small. For me to have got a picture like the one above from a floating dust particle would have required a dust particle of some 1500 microns. Dust particles in ordinary outdoor air are only about 1 micron, and if they are ever bigger than 50 microns visibility is sharply reduced.

Postscript: For a discussion of the type of misleading videos and photos produced by skeptics trying to suggest that orbs are dust (which typically involve raising dust levels much higher than normal), see [this](#) post entitled, "When Skeptics Engage in Deceptive Cheating."

An explanation sometimes given for mysterious orbs is that they are particles of dust on a camera lens. A small particle resting on a camera lens will absolutely not produce something that looks like an orb in a photo. You can prove that by doing this experiment:

- (1) point your camera at the ceiling, with the lens open;
- (2) place a tiny particle like a bread crumb on your lens;
- (3) take a photo;
- (4) blow the particle off of your camera lens.

You will see that the photo absolutely does not show anything that looks like an orb.

Postscript: The images below show orbs I have photographed with the same strange squiggly pattern (as reported [here](#)). The probability of coincidentally getting this much pattern repetition from natural particles is zero.

See [here](#) for more than 25 other other examples of recurring patterns in mysterious orbs, with such a huge number of pattern repetitions that there is no chance that natural particles could have produced them.

As you can see in [this](#) series of posts, I have photographed more than 700 cases of mysterious orbs with stripes (most of which can be seen in [this](#) video). Each of these is a case of a clear sharp detail appearing in an orb. No such photos can be explained as out-of-focus dust particles near the camera, for we would see no clear, sharp details in an out-of-focus particle near the camera. It is futile to claim that such striped orbs are "striped dust." My photos of 700 mysterious orbs with stripes were published prior to September 5, 2019. But doing a Google search for the exact phrase "striped dust," I see that no has used that phrase before September 5, 2019 in connection with any claim that dust particles can have stripes.
